# 2025 CDP Corporate Questionnaire 2025

Word version

**Important: this export excludes unanswered questions**

This document is an export of your organization's CDP questionnaire response. It contains all data points for questions that are answered or in progress. There may be questions or data points that you have been requested to provide, which are missing from this document because they are currently unanswered. Please note that it is your responsibility to verify that your questionnaire response is complete prior to submission. CDP will not be liable for any failure to do so.

# Contents

<b>C1. Introduction.....</b>	<b>7</b>
(1.1) In which language are you submitting your response? .....	7
(1.2) Select the currency used for all financial information disclosed throughout your response. .....	7
(1.3) Provide an overview and introduction to your organization. .....	7
(1.4) State the end date of the year for which you are reporting data. For emissions data, indicate whether you will be providing emissions data for past reporting years.....	8
(1.4.1) What is your organization's annual revenue for the reporting period? .....	9
(1.5) Provide details on your reporting boundary. .....	9
(1.6) Does your organization have an ISIN code or another unique identifier (e.g., Ticker, CUSIP, etc.)? .....	9
(1.7) Select the countries/areas in which you operate. .....	12
(1.15) Which real estate and/or construction activities does your organization engage in? .....	12
(1.24) Has your organization mapped its value chain? .....	12
(1.24.1) Have you mapped where in your direct operations or elsewhere in your value chain plastics are produced, commercialized, used, and/or disposed of? .....	13
<b>C2. Identification, assessment, and management of dependencies, impacts, risks, and opportunities .....</b>	<b>15</b>
(2.1) How does your organization define short-, medium-, and long-term time horizons in relation to the identification, assessment, and management of your environmental dependencies, impacts, risks, and opportunities? .....	15
(2.2) Does your organization have a process for identifying, assessing, and managing environmental dependencies and/or impacts? .....	16
(2.2.1) Does your organization have a process for identifying, assessing, and managing environmental risks and/or opportunities? .....	17
(2.2.2) Provide details of your organization's process for identifying, assessing, and managing environmental dependencies, impacts, risks, and/or opportunities.....	17
(2.2.7) Are the interconnections between environmental dependencies, impacts, risks and/or opportunities assessed? .....	22
(2.3) Have you identified priority locations across your value chain? .....	22
(2.4) How does your organization define substantive effects on your organization? .....	23
<b>C3. Disclosure of risks and opportunities .....</b>	<b>29</b>
(3.1) Have you identified any environmental risks which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future? .....	29
(3.1.1) Provide details of the environmental risks identified which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future. ....	30
(3.1.2) Provide the amount and proportion of your financial metrics from the reporting year that are vulnerable to the substantive effects of environmental risks. ....	36

(3.5) Are any of your operations or activities regulated by a carbon pricing system (i.e. ETS, Cap & Trade or Carbon Tax)? .....	37
(3.5.1) Select the carbon pricing regulation(s) which impact your operations.....	37
(3.5.3) Complete the following table for each of the tax systems you are regulated by.....	37
(3.5.4) What is your strategy for complying with the systems you are regulated by or anticipate being regulated by? .....	38
(3.6) Have you identified any environmental opportunities which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future? .....	38
(3.6.1) Provide details of the environmental opportunities identified which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future. .....	39
(3.6.2) Provide the amount and proportion of your financial metrics in the reporting year that are aligned with the substantive effects of environmental opportunities. ....	45

## **C4. Governance .....** **47**

(4.1) Does your organization have a board of directors or an equivalent governing body? .....	47
(4.1.1) Is there board-level oversight of environmental issues within your organization? .....	48
(4.1.2) Identify the positions (do not include any names) of the individuals or committees on the board with accountability for environmental issues and provide details of the board's oversight of environmental issues.....	48
(4.2) Does your organization's board have competency on environmental issues? .....	51
(4.3) Is there management-level responsibility for environmental issues within your organization?.....	52
(4.3.1) Provide the highest senior management-level positions or committees with responsibility for environmental issues (do not include the names of individuals). .....	53
(4.5) Do you provide monetary incentives for the management of environmental issues, including the attainment of targets? .....	56
(4.5.1) Provide further details on the monetary incentives provided for the management of environmental issues (do not include the names of individuals). .....	57
(4.6) Does your organization have an environmental policy that addresses environmental issues? .....	65
(4.6.1) Provide details of your environmental policies. .....	65
(4.10) Are you a signatory or member of any environmental collaborative frameworks or initiatives? .....	67
(4.11) In the reporting year, did your organization engage in activities that could directly or indirectly influence policy, law, or regulation that may (positively or negatively) impact the environment? .....	67
(4.11.2) Provide details of your indirect engagement on policy, law, or regulation that may (positively or negatively) impact the environment through trade associations or other intermediary organizations or individuals in the reporting year. .....	69
(4.12) Have you published information about your organization's response to environmental issues for this reporting year in places other than your CDP response? .....	83
(4.12.1) Provide details on the information published about your organization's response to environmental issues for this reporting year in places other than your CDP response. Please attach the publication. ....	83

<b>C5. Business strategy.....</b>	<b>87</b>
(5.1) Does your organization use scenario analysis to identify environmental outcomes? .....	87
(5.1.1) Provide details of the scenarios used in your organization's scenario analysis. .....	87
(5.1.2) Provide details of the outcomes of your organization's scenario analysis. .....	96
(5.2) Does your organization's strategy include a climate transition plan? .....	97
(5.3) Have environmental risks and opportunities affected your strategy and/or financial planning?.....	99
(5.3.1) Describe where and how environmental risks and opportunities have affected your strategy. ....	99
(5.3.2) Describe where and how environmental risks and opportunities have affected your financial planning. ....	103
(5.4) In your organization's financial accounting, do you identify spending/revenue that is aligned with your organization's climate transition? .....	104
(5.4.1) Quantify the amount and percentage share of your spending/revenue that is aligned with your organization's climate transition. .....	104
(5.4.2) Quantify the percentage share of your spending/revenue that was associated with eligible and aligned activities under the sustainable finance taxonomy in the reporting year.....	110
(5.4.3) Provide any additional contextual and/or verification/assurance information relevant to your organization's taxonomy alignment. ....	164
(5.5) Does your organization invest in research and development (R&D) of low-carbon products or services related to your sector activities? .....	165
(5.5.6) Provide details of your organization's investments in low-carbon R&D for real estate and construction activities over the last three years. ....	166
(5.10) Does your organization use an internal price on environmental externalities? .....	169
(5.10.1) Provide details of your organization's internal price on carbon. ....	169
(5.11) Do you engage with your value chain on environmental issues? .....	172
(5.11.1) Does your organization assess and classify suppliers according to their dependencies and/or impacts on the environment? .....	172
(5.11.2) Does your organization prioritize which suppliers to engage with on environmental issues? .....	174
(5.11.5) Do your suppliers have to meet environmental requirements as part of your organization's purchasing process? .....	174
(5.11.6) Provide details of the environmental requirements that suppliers have to meet as part of your organization's purchasing process, and the compliance measures in place. ....	175
(5.11.7) Provide further details of your organization's supplier engagement on environmental issues. ....	176
(5.11.9) Provide details of any environmental engagement activity with other stakeholders in the value chain. ....	178
<b>C6. Environmental Performance - Consolidation Approach .....</b>	<b>183</b>
(6.1) Provide details on your chosen consolidation approach for the calculation of environmental performance data.....	183
<b>C7. Environmental performance - Climate Change.....</b>	<b>185</b>

(7.1) Is this your first year of reporting emissions data to CDP? .....	185
(7.1.1) Has your organization undergone any structural changes in the reporting year, or are any previous structural changes being accounted for in this disclosure of emissions data? .....	185
(7.1.2) Has your emissions accounting methodology, boundary, and/or reporting year definition changed in the reporting year? .....	185
(7.1.3) Have your organization's base year emissions and past years' emissions been recalculated as a result of any changes or errors reported in 7.1.1 and/or 7.1.2? ....	186
(7.2) Select the name of the standard, protocol, or methodology you have used to collect activity data and calculate emissions. ....	187
(7.3) Describe your organization's approach to reporting Scope 2 emissions. ....	187
(7.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1, Scope 2 or Scope 3 emissions that are within your selected reporting boundary which are not included in your disclosure? .....	188
(7.5) Provide your base year and base year emissions. ....	188
(7.6) What were your organization's gross global Scope 1 emissions in metric tons CO2e? .....	196
(7.7) What were your organization's gross global Scope 2 emissions in metric tons CO2e? .....	198
(7.8) Account for your organization's gross global Scope 3 emissions, disclosing and explaining any exclusions. ....	200
(7.8.1) Disclose or restate your Scope 3 emissions data for previous years. ....	208
(7.9) Indicate the verification/assurance status that applies to your reported emissions. ....	212
(7.9.1) Provide further details of the verification/assurance undertaken for your Scope 1 emissions, and attach the relevant statements. ....	213
(7.9.2) Provide further details of the verification/assurance undertaken for your Scope 2 emissions and attach the relevant statements. ....	214
(7.9.3) Provide further details of the verification/assurance undertaken for your Scope 3 emissions and attach the relevant statements. ....	217
(7.10) How do your gross global emissions (Scope 1 and 2 combined) for the reporting year compare to those of the previous reporting year? .....	218
(7.10.1) Identify the reasons for any change in your gross global emissions (Scope 1 and 2 combined), and for each of them specify how your emissions compare to the previous year. ....	218
(7.10.2) Are your emissions performance calculations in 7.10 and 7.10.1 based on a location-based Scope 2 emissions figure or a market-based Scope 2 emissions figure? .....	224
(7.12) Are carbon dioxide emissions from biogenic carbon relevant to your organization? .....	224
(7.15) Does your organization break down its Scope 1 emissions by greenhouse gas type? .....	225
(7.16) Break down your total gross global Scope 1 and 2 emissions by country/area. ....	225
(7.17) Indicate which gross global Scope 1 emissions breakdowns you are able to provide. ....	225
(7.17.3) Break down your total gross global Scope 1 emissions by business activity. ....	225
(7.20) Indicate which gross global Scope 2 emissions breakdowns you are able to provide. ....	226
(7.20.3) Break down your total gross global Scope 2 emissions by business activity. ....	226

(7.22) Break down your gross Scope 1 and Scope 2 emissions between your consolidated accounting group and other entities included in your response. ....	226
(7.23) Is your organization able to break down your emissions data for any of the subsidiaries included in your CDP response?.....	227
(7.29) What percentage of your total operational spend in the reporting year was on energy? .....	228
(7.30) Select which energy-related activities your organization has undertaken. ....	228
(7.30.1) Report your organization's energy consumption totals (excluding feedstocks) in MWh.....	228
(7.30.6) Select the applications of your organization's consumption of fuel. ....	231
(7.30.7) State how much fuel in MWh your organization has consumed (excluding feedstocks) by fuel type. ....	232
(7.30.9) Provide details on the electricity, heat, steam, and cooling your organization has generated and consumed in the reporting year.....	235
(7.30.14) Provide details on the electricity, heat, steam, and/or cooling amounts that were accounted for at a zero or near-zero emission factor in the market-based Scope 2 figure reported in 7.7. ....	238
(7.30.16) Provide a breakdown by country/area of your electricity/heat/steam/cooling consumption in the reporting year. ....	246
(7.45) Describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tons CO2e per unit currency total revenue and provide any additional intensity metrics that are appropriate to your business operations. ....	248
(7.53) Did you have an emissions target that was active in the reporting year? .....	249
(7.53.1) Provide details of your absolute emissions targets and progress made against those targets. ....	249
(7.54) Did you have any other climate-related targets that were active in the reporting year?.....	258
(7.55) Did you have emissions reduction initiatives that were active within the reporting year? Note that this can include those in the planning and/or implementation phases. ....	259
(7.55.1) Identify the total number of initiatives at each stage of development, and for those in the implementation stages, the estimated CO2e savings. ....	259
(7.55.2) Provide details on the initiatives implemented in the reporting year in the table below. ....	259
(7.55.3) What methods do you use to drive investment in emissions reduction activities? .....	261
(7.72) Does your organization assess the life cycle emissions of new construction or major renovation projects?.....	262
(7.72.1) Provide details of how your organization assesses the life cycle emissions of new construction or major renovation projects. ....	262
(7.72.2) Can you provide embodied carbon emissions data for any of your organization's new construction or major renovation projects completed in the last three years? .....	263
(7.72.3) Provide details of the embodied carbon emissions of new construction or major renovation projects completed in the last three years. ....	264
(7.74) Do you classify any of your existing goods and/or services as low-carbon products? .....	269
(7.74.1) Provide details of your products and/or services that you classify as low-carbon products. ....	269
(7.76) Does your organization manage net zero carbon buildings? .....	273
(7.77) Did your organization complete new construction or major renovations projects designed as net zero carbon in the last three years?.....	273

(7.78) Explain your organization's plan to manage, develop or construct net zero carbon buildings, or explain why you do not plan to do so.....	273
(7.79) Has your organization retired any project-based carbon credits within the reporting year?.....	273

## **C11. Environmental performance - Biodiversity..... 275**

(11.2) What actions has your organization taken in the reporting year to progress your biodiversity-related commitments?.....	275
(11.3) Does your organization use biodiversity indicators to monitor performance across its activities? .....	275
(11.4) Does your organization have activities located in or near to areas important for biodiversity in the reporting year? .....	276
(11.4.1) Provide details of your organization's activities in the reporting year located in or near to areas important for biodiversity. ....	278

## **C13. Further information & sign off..... 281**

(13.1) Indicate if any environmental information included in your CDP response (not already reported in 7.9.1/2/3, 8.9.1/2/3/4, and 9.3.2) is verified and/or assured by a third party?.....	281
(13.1.1) Which data points within your CDP response are verified and/or assured by a third party, and which standards were used?.....	281
(13.2) Use this field to provide any additional information or context that you feel is relevant to your organization's response. Please note that this field is optional and is not scored.....	287
(13.3) Provide the following information for the person that has signed off (approved) your CDP response. ....	288

## C1. Introduction

### (1.1) In which language are you submitting your response?

Select from:

English

### (1.2) Select the currency used for all financial information disclosed throughout your response.

Select from:

EUR

### (1.3) Provide an overview and introduction to your organization.

#### (1.3.2) Organization type

Select from:

Publicly traded organization

#### (1.3.3) Description of organization

*Vonovia SE is Europe's leading private residential real estate company. Vonovia currently owns 539,753 residential units in all attractive cities and regions in Germany, Sweden and Austria. It further manages around 73,400 apartments owned by others. Its portfolio is worth approximately 82 billion as of December 31st, 2024. This is inclusive of Deutsche Wohnen SE, which was acquired on September 30, 2021. As a modern service company, Vonovia focuses on customer orientation and tenant satisfaction. Offering them an affordable, attractive, and liveable home is the prerequisite for successful corporate development. This is why Vonovia invests in the maintenance, energetic modernization, and senior-friendly conversion of buildings. In addition, development and construction of new apartments, both for its own portfolio and for sale to third parties are part of the business model. 3,747 new apartments could thus be completed in 2024. Other residential services complement the business model. A large number of business processes are integrated: The company's own craftsmen and caretaker's organization, Vonovia Technical Service (VTS), with more than 4,000 employees handles the necessary renovation work, a gardener's and caretaker's organization with over 1,300 employees takes care of the maintenance and development of the green spaces around the buildings, and our own customer service team, which also has over 1,100 employees, takes care of our customers' concerns. Vonovia employs a total of 12,056 people. The company's carbon footprint includes emissions of around 1,89 million tons of CO2. Approximately 97 % of the Scope 1 & 2 emissions are caused by the operation of the rented residential building portfolio. The challenge is to ensure that the buildings erected from the 1950s to 1970s in particular, which account for the largest share of Vonovia's portfolio, are well refurbished in terms of energy efficiency. Improving the energy performance of Vonovia's housing stock - e.g., through energetic refurbishment of the building*

envelope or replacement of the fossil fuel-powered heating systems with more efficient technologies of heat and energy production – therefore is a major lever for reducing GHG emissions. Thus, another lever comprises the expansion of renewable energies as well as innovations in CO2-neutral heating systems. We are aware of our responsibility and have set ourselves the clear goal of achieving a climate-neutral building stock (net-zero) by 2045. This goal is just as much in line with the Paris climate goals as it is with the German Climate Action Plan. You can read about as to how we intend to achieve this goal in our sustainability statement. The Bochum-based company has been listed on the stock exchange since 2013 and is included in the DAX 40 since September 2015. Vonovia SE is also listed in the international indices DAX 50 ESG, Dow Jones Best-in-Class Europe Index, STOXX Global ESG Leaders, EURO STOXX ESG Leaders 50, FTSE EPRA/NAREIT Developed Europe and GPR 250 World.

[Fixed row]

**(1.4) State the end date of the year for which you are reporting data. For emissions data, indicate whether you will be providing emissions data for past reporting years.**

**(1.4.1) End date of reporting year**

12/30/2024

**(1.4.2) Alignment of this reporting period with your financial reporting period**

Select from:

Yes

**(1.4.3) Indicate if you are providing emissions data for past reporting years**

Select from:

Yes

**(1.4.4) Number of past reporting years you will be providing Scope 1 emissions data for**

Select from:

2 years

**(1.4.5) Number of past reporting years you will be providing Scope 2 emissions data for**

Select from:

2 years

## (1.4.6) Number of past reporting years you will be providing Scope 3 emissions data for

Select from:

2 years

[Fixed row]

## (1.4.1) What is your organization's annual revenue for the reporting period?

7080500000

## (1.5) Provide details on your reporting boundary.

	Is your reporting boundary for your CDP disclosure the same as that used in your financial statements?
	Select from: <input checked="" type="checkbox"/> Yes

[Fixed row]

## (1.6) Does your organization have an ISIN code or another unique identifier (e.g., Ticker, CUSIP, etc.)?

**ISIN code - bond**

### (1.6.1) Does your organization use this unique identifier?

Select from:

Yes

### (1.6.2) Provide your unique identifier

ISINDE000A1ML7J1

## ISIN code - equity

### (1.6.1) Does your organization use this unique identifier?

Select from:

Yes

### (1.6.2) Provide your unique identifier

DE000A1ML7J1

## CUSIP number

### (1.6.1) Does your organization use this unique identifier?

Select from:

Yes

### (1.6.2) Provide your unique identifier

92887H107

## Ticker symbol

### (1.6.1) Does your organization use this unique identifier?

Select from:

Yes

### (1.6.2) Provide your unique identifier

n/a

## SEDOL code

### (1.6.1) Does your organization use this unique identifier?

Select from:

No

#### LEI number

### (1.6.1) Does your organization use this unique identifier?

Select from:

Yes

### (1.6.2) Provide your unique identifier

5299005A2ZEP6AP7KM81

#### D-U-N-S number

### (1.6.1) Does your organization use this unique identifier?

Select from:

No

#### Other unique identifier

### (1.6.1) Does your organization use this unique identifier?

Select from:

Yes

### (1.6.2) Provide your unique identifier

A1ML7J, WKN

#### Other unique identifier

### (1.6.1) Does your organization use this unique identifier?

Select from:

Yes

### (1.6.2) Provide your unique identifier

94567408, Common Code

[Add row]

### (1.7) Select the countries/areas in which you operate.

Select all that apply

Austria  
 Germany  
 Sweden

### (1.15) Which real estate and/or construction activities does your organization engage in?

Select all that apply

New construction or major renovation of buildings  
 Buildings management

### (1.24) Has your organization mapped its value chain?

#### (1.24.1) Value chain mapped

Select from:

Yes, we have mapped or are currently in the process of mapping our value chain

#### (1.24.2) Value chain stages covered in mapping

Select all that apply

- Upstream value chain
- Downstream value chain

### (1.24.3) Highest supplier tier mapped

Select from:

- Tier 1 suppliers

### (1.24.4) Highest supplier tier known but not mapped

Select from:

- All supplier tiers known have been mapped

### (1.24.7) Description of mapping process and coverage

*Vonovia monitors its tier 1 suppliers by registering all business partners in its business partner portal, including information on sustainability criteria. All suppliers are required to sign the Vonovia Business Partner Code. In accordance with CSRD requirements, Vonovia has analyzed its value chain to identify and assess risks, opportunities and impacts associated with own business activities, products and services as well as business relationships in the upstream and downstream value chain. Vonovia identified relevant upstream and downstream activities, resources and relationships, outlining all the respective stakeholders and partners in these categories, across its value chain. Our value chain can be split up into the upstream supply chain, our own business and the downstream stages in our value chain. Our business activities comprise the following core activities: construction, rental and management activities, including neighborhood development and customer service, as well as the provision of housing-related services. A detailed overview can be found in the Annual Report 2024 p.65. <https://report.vonovia.com/2024/q4/en/> [Fixed row]*

#### (1.24.1) Have you mapped where in your direct operations or elsewhere in your value chain plastics are produced, commercialized, used, and/or disposed of?

	Plastics mapping	Primary reason for not mapping plastics in your value chain	Explain why your organization has not mapped plastics in your value chain
	Select from:	Select from:	<i>Not relevant for business model</i>

	Plastics mapping	Primary reason for not mapping plastics in your value chain	Explain why your organization has not mapped plastics in your value chain
	<input checked="" type="checkbox"/> No, and we do not plan to within the next two years	<input checked="" type="checkbox"/> Judged to be unimportant or not relevant	

[Fixed row]

## **C2. Identification, assessment, and management of dependencies, impacts, risks, and opportunities**

**(2.1) How does your organization define short-, medium-, and long-term time horizons in relation to the identification, assessment, and management of your environmental dependencies, impacts, risks, and opportunities?**

### **Short-term**

**(2.1.1) From (years)**

0

**(2.1.3) To (years)**

1

**(2.1.4) How this time horizon is linked to strategic and/or financial planning**

*The forecast for the current year is managed via controlling and risk management. The budget will be concrete for the following year and a medium-term plan for the next 5 years will be drawn up in parallel.*

### **Medium-term**

**(2.1.1) From (years)**

2

**(2.1.3) To (years)**

5

**(2.1.4) How this time horizon is linked to strategic and/or financial planning**

Vonovia has implemented a comprehensive risk management system that is based on an integrated five-pillar risk management approach with a focus on medium- and long-term risks. The risk management system is aligned with the corporate strategy and the corporate planning process. Annually a medium-term plan is drawn up for the next 5 years. The risk categories in the risk report of our Annual Report relate to this five-year window.

## Long-term

### (2.1.1) From (years)

5

### (2.1.2) Is your long-term time horizon open ended?

Select from:

Yes

### (2.1.4) How this time horizon is linked to strategic and/or financial planning

All risks that go beyond the medium-term planning process of 5 years are defined as long-term plans and have no specific end date. Depending on the nature of specific risk we use the time period of 10 years as well as the time horizon until 2045 as relevant milestones. This depends on the quality of forecast which can be made for the relevant input factors.

[Fixed row]

## (2.2) Does your organization have a process for identifying, assessing, and managing environmental dependencies and/or impacts?

	Process in place	Dependencies and/or impacts evaluated in this process
	Select from: <input checked="" type="checkbox"/> Yes	Select from: <input checked="" type="checkbox"/> Both dependencies and impacts
[Fixed row]		

**(2.2.1) Does your organization have a process for identifying, assessing, and managing environmental risks and/or opportunities?**

	Process in place	Risks and/or opportunities evaluated in this process	Is this process informed by the dependencies and/or impacts process?
	<i>Select from:</i> <input checked="" type="checkbox"/> Yes	<i>Select from:</i> <input checked="" type="checkbox"/> Both risks and opportunities	<i>Select from:</i> <input checked="" type="checkbox"/> Yes

*[Fixed row]*

**(2.2.2) Provide details of your organization's process for identifying, assessing, and managing environmental dependencies, impacts, risks, and/or opportunities.**

**Row 1**

**(2.2.2.1) Environmental issue**

*Select all that apply*

- Climate change
- Biodiversity

**(2.2.2.2) Indicate which of dependencies, impacts, risks, and opportunities are covered by the process for this environmental issue**

*Select all that apply*

- Dependencies
- Impacts
- Risks
- Opportunities

### (2.2.2.3) Value chain stages covered

*Select all that apply*

- Direct operations
- Upstream value chain
- Downstream value chain

### (2.2.2.4) Coverage

*Select from:*

- Partial

### (2.2.2.5) Supplier tiers covered

*Select all that apply*

- Tier 1 suppliers

### (2.2.2.7) Type of assessment

*Select from:*

- Qualitative and quantitative

### (2.2.2.8) Frequency of assessment

*Select from:*

- More than once a year

### (2.2.2.9) Time horizons covered

*Select all that apply*

- Short-term
- Medium-term
- Long-term

## (2.2.2.10) Integration of risk management process

Select from:

- Integrated into multi-disciplinary organization-wide risk management process

## (2.2.2.11) Location-specificity used

Select all that apply

- Site-specific
- Local
- National

## (2.2.2.12) Tools and methods used

Commercially/publicly available tools

- Encore tool
- WWF Biodiversity Risk Filter

Enterprise Risk Management

- Enterprise Risk Management
- Internal company methods

International methodologies and standards

- IPCC Climate Change Projections
- Life Cycle Assessment

Other

- Internal company methods
- Materiality assessment
- Scenario analysis

## (2.2.2.13) Risk types and criteria considered

#### Acute physical

- Drought
- Flood (coastal, fluvial, pluvial, ground water)
- Heat waves
- Heavy precipitation (rain, hail, snow/ice)
- Storm (including blizzards, dust, and sandstorms)

#### Chronic physical

- Changing temperature (air, freshwater, marine water)
- Heat stress
- Increased severity of extreme weather events
- Precipitation or hydrological variability
- Water stress

#### Policy

- Carbon pricing mechanisms
- Changes to international law and bilateral agreements
- Changes to national legislation

#### Market

- Availability and/or increased cost of certified sustainable material
- Availability and/or increased cost of raw materials
- Changing customer behavior

#### Reputation

- Stigmatization of sector

#### Technology

- Transition to lower emissions technology and products

#### Liability

- Exposure to litigation
- Non-compliance with regulations

## (2.2.2.16) Further details of process

*Impacts, risks, opportunities & dependencies:* Vonovia has implemented a comprehensive risk management system that ensures that all risks relevant to the company are being identified, assessed and managed. Risk evaluation is updated biannually. Thus, climate-related risk management is fully integrated into multi-disciplinary company-wide risk management process. This reduces potential risks, secures the company's continued existence, supports its strategic development and promotes responsible entrepreneurial action. Overall, Vonovia's risk management system is based on an integrated five-pillar risk management approach with a focus on medium- and long-term risks. The content of the existing risk management system is aligned with the corporate strategy, including relevant sustainability aspects. In the case of ESG risks, the effects of the risks on Vonovia (outside-in view) are integrated, as well as the effects (impacts) on the environment and society (inside-out view). With the help of a materiality analysis, potential ESG (environmental, social, governance) risks are examined and assessed for materiality. Consequently, risk assessment not only covers our direct operations, but also impacts on upstream and downstream supply chain. This process was further strengthened by the introduction of the IRO assessment in accordance with the European Sustainability Reporting Standards (ESRS): all impacts, risks and opportunities from the IRO assessment were integrated into the Group's risk management system and are evaluated there - also on a regular basis. Opportunities: In the process of defining its strategy and preparing its short and medium-term plans, Vonovia identifies earnings potential that has been reflected appropriately in these plans, taking the corresponding assumptions and scenarios into account. The assumptions regarding the company's sustainability strategy, sociological and political megatrends, the regulatory environment, the financing environment and the company's operating business are not only associated with the risks and impacts described above. Vonovia's business development can also end up being more favourable than in the assumptions included in the company's plans. These opportunities can arise from a scenario in which strategy-related opportunities, economic environment and market-related factors, and the company's operating business show more positive development than that underlying the corporate plans. Vonovia's sustainability strategy could create further opportunities extending beyond the corporate targets already defined in the 2025 budget. Vonovia's long-term climate journey requires new concepts for measures and financing to underpin its ecological, technological and economic objectives. As with the risks and impacts, connectivity and dependencies with the existing systems at Vonovia was strengthened by implementing the IRO assessment as part of the ESRS and all IRO assessments were implemented in the risk management system, which has now

been expanded to include impacts and opportunities. In addition, the strategy, which is based on our defined neighborhoods, offers a whole variety of opportunities with regard to those modernization measures that relate directly to the existing portfolio and measures relating to new construction, but also measures relating to the residential environment.

## **(2.2.7) Are the interconnections between environmental dependencies, impacts, risks and/or opportunities assessed?**

### **(2.2.7.1) Interconnections between environmental dependencies, impacts, risks and/or opportunities assessed**

Select from:

Yes

### **(2.2.7.2) Description of how interconnections are assessed**

*Risks, opportunities & impacts: The content of the existing risk management system is aligned with the corporate strategy, including relevant sustainability aspects. In the case of ESG risks, the effects of the risks on Vonovia (outside-in view) are integrated, as well as the effects on the environment and society (inside-out view). With the help of a materiality analysis, potential ESG (environmental, social, governance) risks are examined and assessed for materiality. Consequently, risk assessment not only covers our direct operations, but also impacts on upstream and downstream supply chain. This process was further strengthened in the financial year by the introduction of the IRO assessment in accordance with the European Sustainability Reporting Standards (ESRS): all impacts, risks and opportunities from the IRO assessment were integrated into the Group's risk management system and are evaluated there - also on a regular basis. By also integrating the impacts into the Group-wide risk management system, we are strengthening the connectivity between the inside-out and outside-in perspective and ensuring a standardized approach to impact assessment and selection. Opportunities: In the process of defining its strategy and preparing its short and medium-term plans, Vonovia identifies earnings potential that has been reflected appropriately in these plans, taking the corresponding assumptions and scenarios into account. The assumptions regarding the company's sustainability strategy, sociological and political megatrends, the regulatory environment, the financing environment and the company's operating business are not only associated with the risks described above. Vonovia's business development can also end up being more favourable than in the assumptions included in the company's plans. These opportunities can arise from a scenario in which strategy-related opportunities, economic environment and market-related factors, and the company's operating business show more positive development than that underlying the corporate plans. Vonovia's sustainability strategy could create further opportunities extending beyond the corporate targets already defined in the 2025 budget. Vonovia's long-term climate journey requires new concepts for measures and financing to underpin its ecological, technological and economic objectives. As with the risks, connectivity with the existing systems at Vonovia was strengthened by implementing the IRO assessment as part of the ESRS and all IRO assessments were implemented in the risk management system, which has now been expanded to include impacts and opportunities. In addition, the strategy, which is based on our defined neighborhoods, offers a whole variety of opportunities with regard to those modernization measures that relate directly to the existing portfolio and measures relating to new construction, but also measures relating to the residential environment.*

[Fixed row]

## **(2.3) Have you identified priority locations across your value chain?**

### (2.3.1) Identification of priority locations

Select from:

- No, and we do not plan to within the next two years

### (2.3.7) Primary reason for not identifying priority locations

Select from:

- Judged to be unimportant or not relevant

### (2.3.8) Explain why you do not identify priority locations

As part of the materiality analysis and the continuous process of analysing and selecting locations for construction and modernization measures, we take into account the impact of our business activities (including the upstream and downstream value chain) on people and nature. This is done to the same extent at all locations, so that we have a functioning early warning system to identify potential critical impacts in advance of measures. This enables us to prevent ecologically sensitive or valuable locations from being affected as early as the planning process. There are therefore no priority locations as defined by the TNFD standard.

[Fixed row]

## (2.4) How does your organization define substantive effects on your organization?

### Risks

#### (2.4.1) Type of definition

Select all that apply

- Qualitative
- Quantitative

#### (2.4.2) Indicator used to define substantive effect

Select from:

- Other, please specify :Balance sheet

#### (2.4.3) Change to indicator

Select from:

Absolute decrease

#### (2.4.5) Absolute increase/ decrease figure

2400000000

#### (2.4.6) Metrics considered in definition

Select all that apply

Likelihood of effect occurring

#### (2.4.7) Application of definition

Our risk management process is divided into five different categories to assess the potential amount of financial losses. We distinguish between the impact on the income statement on the one hand and the impact on the balance sheet on the other. Both impacts are understood in line with the medium-term planning horizon as a potential financial loss over five years. Please find detailed information about the risk management process in our Annual Report 2024, p.161. When it comes to assessing risk, a distinction is made between risks with an impact on profit and loss and those affecting the balance sheet. Risks with an impact on profit and loss have a negative effect on the company's sustained earnings power and, as a result, on Adjusted EBITDA in the individual segments and Adjusted EBT. In general, these risks also have an impact on liquidity. Risks affecting the balance sheet do not impact Adjusted EBT, but they certainly do impact the assets and, in general, also profit for the period and the EPRA NTA. These risks can also not affect liquidity, e.g., because they only impact property values. Risk assessments are always performed in quantitative terms, if possible. As a general rule, the risk assessment should always be based on a worst-case scenario. If this is difficult to achieve or not possible, a qualitative assessment is performed using a detailed matrix comprising five loss categories. The expected amount of loss is classified to one of five categories. Losses of category (3) and higher are defined as "significant" damage and thus as substantial financial impact for our business. This corresponds to a financial impact on profit and loss of more than €50-180 million in Adj EBT or an accumulated loss of more than €2,400 million related to the balance sheet. For the expected probability of occurrence five clusters have been defined: • Very likely (5): It is to be assumed that the risk will materialize during the observation period. 95% probability • Likely (4): The risk is likely to materialize during the observation period. 60–95% probability • Possible (3): The risk could materialize during the observation period. 40–59% probability • Unlikely (2): The risk is unlikely to materialize during the observation period. 5–39% probability • Very unlikely (1): It is to be assumed that the risk will not materialize during the observation period. < 5% probability

Select from:

Risk1

### (3.1.1.3) Risk types and primary environmental risk driver

Policy

Carbon pricing mechanisms

### (3.1.1.4) Value chain stage where the risk occurs

Select from:

Direct operations

### (3.1.1.6) Country/area where the risk occurs

Select all that apply

Germany

### (3.1.1.9) Organization-specific description of risk

*[Situation] Current legislation in Germany includes a carbon price for fossil fuels used for heating, like natural gas, oil, coal, and district heating (Fuel Emissions Trading Act BEHG). [Timeline] The carbon price was introduced in 2021 at €25 per metric ton CO2 and will rise to €55 per ton by 2025. In 2024, the price stood at €45 per ton. By 2026, it will vary between €55-€65, from 2027 onwards it will be determined in a free trading system. [Task] The carbon price split between owners and tenants. Owners cover 0% to 95% of the cost, depending on a building's CO2 efficiency (e.g. 0% if CO2 <12 kg/year; 95% if CO2 >52 kg/year). Highly efficient buildings exempt owners from any cost, incentivizing modernization and energy-efficient practices. With 87% of our portfolio in Germany, this directly impacts our business, making modernization efforts financially crucial. [Action] We aim to achieve a climate-neutral building portfolio by 2045, targeting carbon intensity of <5 kg CO2/m² of rental area. We focus on 1) energy-efficient refurbishment of building envelope, 2) increasing share of renewable energies in neighborhood, 3)*

transformation of energy sector. [Result] Through our modernization program, we are significantly reducing the CO2 intensity of our buildings and thus lowering our carbon price burden. Since our 2021 base year, we've reduced the CO2 intensity of our German building stock by 18.8% (from 38.4 to 31.2 kg CO2/m2).

### (3.1.1.11) Primary financial effect of the risk

Select from:

- Increased indirect [operating] costs

### (3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization

Select all that apply

- Medium-term

### (3.1.1.13) Likelihood of the risk having an effect within the anticipated time horizon

Select from:

- About as likely as not

### (3.1.1.14) Magnitude

Select from:

- Low

### (3.1.1.16) Anticipated effect of the risk on the financial position, financial performance and cash flows of the organization in the selected future time horizons

Medium-term we are anticipating a financial effect from carbon pricing mechanisms. Based on our current risk assessment, this could lead to increased indirect (operating) costs in the range of € 5-50 million. The CO2 price is incorporated in our planning, representing the base case. The financial effect of this risk refers to the variation in costs that occurs in the worst-case scenario.

### (3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

- Yes

### (3.1.1.21) Anticipated financial effect figure in the medium-term – minimum (currency)

5000000

### (3.1.1.22) Anticipated financial effect figure in the medium-term – maximum (currency)

50000000

### (3.1.1.25) Explanation of financial effect figure

*In our risk management, the risk falls into the potential loss range (1) of € 5-50 million for the 5-year period (in Adj EBT). The expected CO2 price including the annual increase determined by the German government is reflected in our medium-term plan for the next 5 years. Here we take into account the different burdensharing between owner and tenants depending on the CO2 intensity (CO2e/m<sup>2</sup> rental space) of the building as well as planned measures of modernization, sales and new construction. As a risk we defined the difference of a substantial increase of the CO2 price especially after 2026 and the planned CO2 price cost for Vonovia. We assume a continuous increase in the CO2 levy of up to >€100/tCO2 after 2027 while the burden sharing mechanism is assumed to remain as of today. This resulted in a potential cost for the period 2024 to 2029 in the range of € 5-50 million, with a likelihood in the range of 5-39%.*

### (3.1.1.26) Primary response to risk

Infrastructure, technology and spending

Other infrastructure, technology and spending, please specify :energy refurbishment of our buildings to limit energy consumption and emissions via measures for modernization, exchange fossil fuel of heating systems as well as the installation of photovoltaic panels on all suitable roofs

### (3.1.1.27) Cost of response to risk

4032960000

### (3.1.1.28) Explanation of cost calculation

*As part of our growth strategy defined in 2024, we are driving and accelerating additional initiatives until 2029 to support our GHG reduction strategy: increased investments in serial refurbishment (an industrialized system that bundles and standardizes all steps in the refurbishment process), in the new concept “heat pump cube” (a heat pump center that combines all the necessary components in an external module and is installed on-site outside the building) and in accelerated installation of PV on our buildings (installed capacity of 400 MWp until 2028). All activities result in an aggregated long-term investment plan with an average investment of around €800 mn p.a. in the next 5 years, or a total investment in this period of around €4 bn. These activities are the response for risk 3 as well.*

### (3.1.1.29) Description of response

Our response to this risk is our GHG emission reduction strategy which is based on three pillars: 1. increasing energy efficiency through energy-efficient refurbishment of the building envelope (facades, basement ceilings and attics, the replacement of windows and the installation of new heating boilers), 2. Increasing the share of renewable energies in the neighborhood (exchange of conventional heating systems with heat-pumps or district heating) and 3. Comprehensive transformation of the energy sector. In 2024, we modernized around 6,800 units and achieved a refurbishment rate of around 1.3% in our German portfolio. Additionally, we replaced heating systems in around 500 units in the reporting year. As part of our growth strategy defined in 2024, we are driving and accelerating additional initiatives until 2029 to support our GHG reduction strategy: increased investments in serial refurbishment (an industrialized system that bundles and standardizes all steps in the refurbishment process), in the new concept "heat pump cube" (a heat pump center that combines all the necessary components in an external module and is installed on-site outside the building) and in accelerated installation of PV on our buildings (installed capacity of 400 MWp until 2028). All activities result in an aggregated long-term investment plan with an average investment of around €800 mn p.a. in the next 5 years, or a total investment in this period of around €4 bn. These activities are the response for risk 3 as well.

## Climate change

### (3.1.1.1) Risk identifier

Select from:

- Risk2

### (3.1.1.3) Risk types and primary environmental risk driver

Acute physical

- Other acute physical risk, please specify :Increased severity and frequency of extreme weather events such as cyclones and floods

### (3.1.1.4) Value chain stage where the risk occurs

Select from:

- Direct operations

### (3.1.1.6) Country/area where the risk occurs

Select all that apply

- Germany

### (3.1.1.9) Organization-specific description of risk

*[Situation] Extreme weather events pose increased risks to nature, buildings, infrastructure, and human health, and are expected to rise in frequency and intensity due to climate change. The IPCC's Sixth Assessment Report states that some climate-related events, like cyclones and floods, are already irreversible. In Germany, geoinformation maps by the Federal Institute for Urban, Building, and Spatial Research (<https://www.gisimmorisknaturgefahren.de/immorisk.html>) indicate that extreme weather events will increase. [Task] To assess the impact and risk for the entire building stock, a systematic evaluation of magnitude and regional occurrence was necessary. A physical hazard scenario analysis confirmed the increasing impact of extreme weather on our portfolio. Task is to prepare for these events, implement security and emergency systems, and introduce mitigation measures. [Action] These measures are being applied to new construction, neighborhood developments, and residential areas. They include shading, improved windows, intelligent water management, and expanding retention systems, like roof greening. [Result] We've developed a comprehensive risk assessment for all buildings, integrated into new construction and modernization. Assessment shows that, thanks to past measures, our assets' vulnerability (net risk) is significantly lower than their sensitivity to climate hazards (gross risk). The assessment will be regularly updated with new climate data and mitigation efforts.*

### **(3.1.1.11) Primary financial effect of the risk**

*Select from:*

- Increased indirect [operating] costs

### **(3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization**

*Select all that apply*

- Medium-term

### **(3.1.1.13) Likelihood of the risk having an effect within the anticipated time horizon**

*Select from:*

- Likely

### **(3.1.1.14) Magnitude**

*Select from:*

- Low

### **(3.1.1.16) Anticipated effect of the risk on the financial position, financial performance and cash flows of the organization in the selected future time horizons**

*Medium-term (here 5 years) we are anticipating a financial effect from acute physical risks. Based on our current risk assessment, this could lead to increased indirect (operating) costs in the range of € 5-50 million.*

### (3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

Yes

### (3.1.1.21) Anticipated financial effect figure in the medium-term – minimum (currency)

5000000

### (3.1.1.22) Anticipated financial effect figure in the medium-term – maximum (currency)

50000000

### (3.1.1.25) Explanation of financial effect figure

Currently, around 90% of all building damage caused by natural hazards is covered by insurance. Our calculation assumes that over the 5 year period of risk calculation our portfolio will remain insurable and this relation will remain constant. Assuming a linear potential loss distribution this results in a financial impact of around €8 million per year or overall a financial impact in the range of €5 – 50 million, while the possibility of insuring buildings against extreme weather damage continues to exist.

### (3.1.1.26) Primary response to risk

Policies and plans

Increase insurance coverage

### (3.1.1.27) Cost of response to risk

37500000

### (3.1.1.28) Explanation of cost calculation

Extreme weather events will increasingly threaten our buildings and thus increase insurance costs. To calculate the potential cost of responding to this risk, we assume that the possibility of insuring buildings against extreme weather damage continues to exist. The cost of response therefore is the share of the overall insurance fees which covers the damages caused by extreme weather incidents. It is assumed that the share is constant over the next ten years which is the period of the risk and the cost of response.

### (3.1.1.29) Description of response

Our response to this risk is our insurance coverage. Currently, around 90% of all building damage caused by natural hazards is covered by insurance.  
[Add row]

## (3.1.2) Provide the amount and proportion of your financial metrics from the reporting year that are vulnerable to the substantive effects of environmental risks.

### Climate change

#### (3.1.2.1) Financial metric

Select from:

OPEX

#### (3.1.2.2) Amount of financial metric vulnerable to transition risks for this environmental issue (unit currency as selected in 1.2)

12000000

#### (3.1.2.3) % of total financial metric vulnerable to transition risks for this environmental issue

Select from:

1-10%

#### (3.1.2.4) Amount of financial metric vulnerable to physical risks for this environmental issue (unit currency as selected in 1.2)

7512000

#### (3.1.2.5) % of total financial metric vulnerable to physical risks for this environmental issue

Select from:

Less than 1%

### (3.1.2.7) Explanation of financial figures

*Vonovia did not conduct a comprehensive assessment of all its financial metrics and how they are vulnerable to the substantive effects of climate change risks. Nevertheless, we utilized our response to the CDP query 3.1.1 as a basis to input data and a preliminary estimate. For this row we used the total cost of carbon tax paid of 12 million (see 3.5.3). This figure was then compared to Vonovia's 2023 OpEx, in anticipation that carbon pricing mechanisms might influence our OpEx in the medium-term. We have fully classified the 12,000,000 as a transition risk, leading to a zero allocation for physical risk. The outcome of this preliminary assessment indicates that 1-10% of the OpEx is vulnerable due to this transition risks (Physical risk due to zero allocation Less than 1%).*

[\[Add row\]](#)

## (3.5) Are any of your operations or activities regulated by a carbon pricing system (i.e. ETS, Cap & Trade or Carbon Tax)?

Select from:

Yes

### (3.5.1) Select the carbon pricing regulation(s) which impact your operations.

Select all that apply

Other carbon tax, please specify :Current legislation in Germany includes a carbon price for fossil fuels used for heating, such as natural gas, oil and coal (Fuel Emissions Trading Act BEHG). The carbon price for these Scope-1 emissions applied for the first time in 2021.

### (3.5.3) Complete the following table for each of the tax systems you are regulated by.

Other carbon tax, please specify

#### (3.5.3.1) Period start date

12/31/2023

#### (3.5.3.2) Period end date

12/30/2024

#### (3.5.3.3) % of total Scope 1 emissions covered by tax

### (3.5.3.4) Total cost of tax paid

12000000

### (3.5.3.5) Comment

The carbon price was introduced in 2021 at €25 per metric ton CO2 and will rise to €55 per ton by 2025. In 2024, the price stood at €45 per ton. By 2026, it will vary between €55-€65, from 2027 onwards it will be determined in a free trading system. The carbon price split between owners and tenants. Owners cover 0% to 95% of the cost, depending on a building's CO2 efficiency (e.g. 0% if CO2 <12 kg/year; 95% if CO2 >52 kg/year). Highly efficient buildings exempt owners from any cost, incentivizing modernization and energy-efficient practices. With 87% of our portfolio in Germany, this directly impacts our business, making modernization efforts financially crucial. As a first step, the risk has therefore been included and assessed in our risk management. In our risk management, the risk falls into the potential loss range (2) of 5-50 million for the 5-year period (based on Adj. EBT). We assume a continuous increase in the CO2 levy for our Scope 1 emissions from 25/tCO2 in 2021 until 65/tCO2 in 2026 (also after 2026 up to >100/tCO2 in 2027). This results in a potential cost for the period 2024 to 2029 in the range of 5-50 million. As a second step, we are aware of the fact that most of our Scope 1 and 2 emissions are of the properties in our portfolio. The majority of these are in Germany. Therefore, we aim to achieve a climate-neutral building portfolio by 2045, targeting carbon intensity of <5 kg CO2/m² of rental area. We focus on 1. energy-efficient refurbishment of building envelope, 2) increasing share of renewable energies in neighborhood, 3) transformation of energy sector.

[Fixed row]

### (3.5.4) What is your strategy for complying with the systems you are regulated by or anticipate being regulated by?

Since 2023, the carbon tax has to be split between owners and tenants. Depending on CO2 intensity of a building, owners have to bear between 0 and 95% of carbon tax. As 87% of our portfolio is located in Germany, the carbon tax has a large direct impact on our business. As a first step, the risk has therefore been included and assessed in our risk management. In our risk management, the risk falls into the potential loss range (2) of 5-50 million for the 5-year period (based on Adj. EBT). We assume a continuous increase in the CO2 levy for our Scope 1 emissions from 25/tCO2 in 2021 until 65/tCO2 in 2026 (also after 2026 up to 100/tCO2 in 2027). While this is already incorporated in our business plan there exists a risk that the carbon price will increase even more than in our base case. The deviation of this worst case results in a potential risk for the period 2024 to 2029 in the range of 5-50 million. As a second step, we are aware of the fact that most of our Scope 1 and 2 emissions are of the properties in our portfolio. The majority of these are in Germany. Therefore, our task is to increase energy efficiency through energy refurbishment of our buildings to limit energy consumption and emissions. We have set the target of achieving a climate-neutral building portfolio by 2045, with carbon intensity of less than 5 kg of CO2 equivalents per m² of rental area. Vonovia is committed to making its property portfolio virtually climate neutral by 2045. The energy-efficient modernization measures focus on heat insulation for facades, basement ceilings and attics, the replacement of windows and the installation of new heating systems.

### (3.6) Have you identified any environmental opportunities which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?

	Environmental opportunities identified
Climate change	<p>Select from:</p> <p><input checked="" type="checkbox"/> Yes, we have identified opportunities, and some/all are being realized</p>

[Fixed row]

**(3.6.1) Provide details of the environmental opportunities identified which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future.**

**Climate change**

**(3.6.1.1) Opportunity identifier**

Select from:

Opp1

**(3.6.1.3) Opportunity type and primary environmental opportunity driver**

Products and services

Other products and services opportunity, please specify :Additional rental income through increase in energy-efficient building refurbishment (building efficiency / energy retrofitting)

**(3.6.1.4) Value chain stage where the opportunity occurs**

Select from:

Direct operations

**(3.6.1.5) Country/area where the opportunity occurs**

Select all that apply

- Germany

### (3.6.1.8) Organization specific description

*[Situation] Energy-efficient retrofitting of the building stock is the most significant lever on the path to a carbon-neutral portfolio. [Task] To create opportunities for cost savings and prepare for future developments (e.g., taxes related to energy consumption or resource conservation), Vonovia focuses on modernization and renovation projects. [Action] In 2024, we achieved a renovation rate of 1.3% in our German portfolio. Our modernization efforts aim to reduce heating costs and CO2 emissions. Key measures include thermal insulation of facades, basement ceilings, and attics, window replacements, and new heating systems. This ensures modern living comfort, building efficiency, and enhanced climate protection. In 2024, we modernized approximately 6,400 homes in Germany (excluding heating upgrades) and replaced boilers in around 500 units, reducing heating costs and operating expenses while saving about 5,500 tons of CO2. [Timeline, Result] Our overall refurbishment rate in 2024 was 1.3%.*

### (3.6.1.9) Primary financial effect of the opportunity

Select from:

- Other, please specify :Additional rental revenue through increase in energy-efficient building refurbishment

### (3.6.1.10) Time horizon over which the opportunity is anticipated to have a substantive effect on the organization

Select all that apply

- Medium-term

### (3.6.1.11) Likelihood of the opportunity having an effect within the anticipated time horizon

Select from:

- Virtually certain (99–100%)

### (3.6.1.12) Magnitude

Select from:

- Medium

### (3.6.1.14) Anticipated effect of the opportunity on the financial position, financial performance and cash flows of the organization in the selected future time horizons

Medium-term we are anticipating a financial effect from "Building efficiency/ energy efficient retrofitting". Based on our current assessment, this could lead to additional rental income in the range of € 180-450 million.

### **(3.6.1.15) Are you able to quantify the financial effects of the opportunity?**

Select from:

Yes

### **(3.6.1.19) Anticipated financial effect figure in the medium-term - minimum (currency)**

180000000

### **(3.6.1.20) Anticipated financial effect figure in the medium-term - maximum (currency)**

450000000

### **(3.6.1.23) Explanation of financial effect figures**

*The opportunity is to increase the measures of energy-efficient building refurbishment. The calculation is based on the planned modernization activities for the next 5 year period. Assuming a constant modernization allocation to tenants of 1.25 per m<sup>2</sup>, this would result in additional rental income of around 365 million by 2029 - or an annual average of around 73 million in additional income.*

### **(3.6.1.24) Cost to realize opportunity**

4032960000

### **(3.6.1.25) Explanation of cost calculation**

*The cost for realising this opportunity is our GHG emission reduction strategy which is based on three pillars: 1. increasing energy efficiency through energy-efficient refurbishment of the building envelope (facades, basement ceilings and attics, the replacement of windows and the installation of new heating boilers), 2. Increasing the share of renewable energies in the neighborhood (exchange of conventional heating systems with heat-pumps or district heating) and 3. Comprehensive transformation of the energy sector. In 2024, we modernized around 6,800 units and achieved a refurbishment rate of around 1.3% in our German portfolio. Additionally, we replaced heating systems in around 500 units in the reporting year. As part of our growth strategy defined in 2024, we are driving and accelerating additional initiatives until 2028 to support our GHG reduction strategy: increased investments in serial refurbishment (an industrialized system that bundles and standardizes all steps in the refurbishment process), in the new concept "heat pump cube" (a heat pump center that combines all the necessary components in an external module and is installed on-site outside the building) and in accelerated installation of PV on our buildings (installed capacity of 400 MWp until 2028). All*

activities result in an aggregated long-term investment plan with an average investment of around €800 mn p.a. in the next 5 years, or a total investment in this period of around €4 bn. These activities are the response for risk 1 as well.

### (3.6.1.26) Strategy to realize opportunity

The cost for realising this opportunity is our GHG emission reduction strategy which is based on three pillars: 1. increasing energy efficiency through energy-efficient refurbishment of the building envelope (facades, basement ceilings and attics, the replacement of windows and the installation of new heating boilers), 2. Increasing the share of renewable energies in the neighborhood (exchange of conventional heating systems with heat-pumps or district heating) and 3. Comprehensive transformation of the energy sector. In 2024, we modernized around 6,800 units and achieved a refurbishment rate of around 1.3% in our German portfolio. Additionally, we replaced heating systems in around 500 units in the reporting year. As part of our growth strategy defined in 2024, we are driving and accelerating additional initiatives until 2028 to support our GHG reduction strategy: increased investments in serial refurbishment (an industrialized system that bundles and standardizes all steps in the refurbishment process), in the new concept "heat pump cube" (a heat pump center that combines all the necessary components in an external module and is installed on-site outside the building) and in accelerated installation of PV on our buildings (installed capacity of 400 MWp until 2028). All activities result in an aggregated long-term investment plan with an average investment of around €800 mn p.a. in the next 5 years, or a total investment in this period of around €4 bn. These activities are the response for risk 1 as well.

## Climate change

### (3.6.1.1) Opportunity identifier

Select from:

- Opp2

### (3.6.1.3) Opportunity type and primary environmental opportunity driver

Energy source

- Other energy source opportunity, please specify :extension of selling energy

### (3.6.1.4) Value chain stage where the opportunity occurs

Select from:

- Direct operations

### (3.6.1.5) Country/area where the opportunity occurs

Select all that apply

- Germany

### (3.6.1.8) Organization specific description

*[Situation] Electricity demand in Germany will increase significantly due to electrification (e.g. heatpumps and electromobility). Studies assume an increase of around 8-21% between 2022 and 2030. At the same time the share of renewable electricity production (e.g. from Photovoltaics (PV)) needs to increase to 80% by 2030 to meet emission reduction targets. Feeding self-generated electricity into the public grid is possible and is remunerated which promotes tenant participation in the energy transition. [Task] Our neighborhoods must become independent energy producers, enabling renewable energy to be produced and consumed on site. Vonovia has set up its own energy company (VESG). [Action] For Vonovia, there is a great opportunity in the expansion and operation of PV systems on the roofs of its building portfolio and supplying tenants and other clients with (locally produced) renewable electricity. With favorable tenant electricity tariffs, we can offer our customers added value and position Vonovia as a pioneer of the real estate industry in the decentralized energy transition – while, at the same time, creating a business area with a relevant contribution to EBITDA. [Result] In 2024, Vonovia generated 20,410 MWh renewable energy from PV in Germany. 46,000 tenants purchased green electricity directly from VESG in 2024.*

### (3.6.1.9) Primary financial effect of the opportunity

Select from:

- Increased revenues resulting from increased demand for products and services

### (3.6.1.10) Time horizon over which the opportunity is anticipated to have a substantive effect on the organization

Select all that apply

- Medium-term

### (3.6.1.11) Likelihood of the opportunity having an effect within the anticipated time horizon

Select from:

- Likely (66–100%)

### (3.6.1.12) Magnitude

Select from:

- Medium

### (3.6.1.14) Anticipated effect of the opportunity on the financial position, financial performance and cash flows of the organization in the selected future time horizons

Medium-term we are anticipating a financial effect from "extension of selling own produced PV and other renewable electricity". Based on our current assessment, this could lead to an increase of income in the range of € 180-450 million.

### (3.6.1.15) Are you able to quantify the financial effects of the opportunity?

Select from:

Yes

### (3.6.1.19) Anticipated financial effect figure in the medium-term - minimum (currency)

180000000

### (3.6.1.20) Anticipated financial effect figure in the medium-term - maximum (currency)

450000000

### (3.6.1.23) Explanation of financial effect figures

The figure indicates the revenue potential from the sale of PV and general renewable electricity for a 5-year period up to 2029, if we continuously increase our PV capacities until then and expand the yearly installation in order to supply ~150 000 customers over 5 years directly with PV electricity and ~380 000 additional clients with other renewable electricity. The total installed PV output in 2028 shall be >400 MWp. Further installation will continue until 2032.

### (3.6.1.24) Cost to realize opportunity

548352000

### (3.6.1.25) Explanation of cost calculation

One of the most important ways in which we contribute to the (decentralized) supply of renewable energies is by installing PV systems on the roofs of our properties and offering renewable electricity. As part of our GHG emission reduction strategy we aim to increasing the share of renewable energies in the neighborhood (exchange of conventional heating systems with heat-pumps or district heating) and transforming the energy sector. Therefore we invest in renewable energy supply/sale. As part of our growth strategy defined in 2024, we are driving and accelerating additional initiatives until 2028 among which the accelerated installation of PV on

our buildings (installed capacity of 400 MWp until 2028) To take advantage of the opportunity, it is necessary to gradually build up internal structures (FTE, know-how,...) The value here describes the investment sums for extension of renewable electricity offerings (capex), added up for the 5-year period until 2029.

### (3.6.1.26) Strategy to realize opportunity

One of the most important ways in which we contribute to the (decentralized) supply of renewable energies is by installing PV systems on the roofs of our properties and offering renewable electricity. As part of our GHG emission reduction strategy we aim to increasing the share of renewable energies in the neighborhood (exchange of conventional heating systems with heat-pumps or district heating) and transforming the energy sector. Therefore we invest in renewable energy supply/sale. As part of our growth strategy defined in 2024, we are driving and accelerating additional initiatives until 2028 among which the accelerated installation of PV on our buildings (installed capacity of 400 MWp until 2028) To take advantage of the opportunity, it is necessary to gradually build up internal structures (FTE, know-how,...) The value here describes the investment sums for extension of renewable electricity offerings (capex), added up for the 5-year period until 2029.  
[Add row]

## (3.6.2) Provide the amount and proportion of your financial metrics in the reporting year that are aligned with the substantive effects of environmental opportunities.

### Climate change

#### (3.6.2.1) Financial metric

Select from:

Revenue

#### (3.6.2.2) Amount of financial metric aligned with opportunities for this environmental issue (unit currency as selected in 1.2)

50000000

#### (3.6.2.3) % of total financial metric aligned with opportunities for this environmental issue

Select from:

Less than 1%

#### (3.6.2.4) Explanation of financial figures

*The revenue which is aligned with the opportunities refers to additional rental income (see Opp 1) and additional revenue from sale of renewable electricity (see Opp 2) The amount of financial metric aligned with opportunity is based on the following business segments as stated in our Segment Reporting 2024 (Annual Report): - Total rental revenue (AR2024) - total revenue from energy sale (Value Add AR2024) > Total 4.6 bln In 2024 the revenue from opportunities was about 50 mln EUR representing less than 1% of overall related revenue. The % of total financial metric is based on the calculations of opportunities.*

## C4. Governance

### (4.1) Does your organization have a board of directors or an equivalent governing body?

#### (4.1.1) Board of directors or equivalent governing body

Select from:

- Yes

#### (4.1.2) Frequency with which the board or equivalent meets

Select from:

- More frequently than quarterly

#### (4.1.3) Types of directors your board or equivalent is comprised of

Select all that apply

- Executive directors or equivalent
- Non-executive directors or equivalent
- Independent non-executive directors or equivalent

#### (4.1.4) Board diversity and inclusion policy

Select from:

- Yes, and it is publicly available

#### (4.1.5) Briefly describe what the policy covers

Vonovia has a two-tier system including a supervisory board (SB) and a board of management (BM): When nominating candidates for election, the SB should also take diversity into account. In accordance with the German Act on the Equal Participation of Women and Men in Leadership Positions in the Private Sector and the Public Sector, the SB should comprise at least 30% women and 30% men. Vonovia intends for the Nomination Committee to continue to have at least one female member. Further, we refer to the German Stock Corporation Act as well as the German Corporate Governance Codex in terms of an equal distribution. Vonovia's SB should meet both criteria in the current target period leading up to the end of 2026. When assessing potential candidates for reelection or to fill a SB position that has

become vacant, qualified women are to be included in the selection process and given appropriate consideration when the nominations are made. For the BM, the policy outlines its Duties, responsibilities, recruitment processes and the collaboration with the SB. In accordance with the Articles of Association, the MB of Vonovia SE consists of at least two members. The MB should perform its management duties in a manner that is free of any conflicts of interest. See: Corporate Governance Declaration (<https://www.vonovia.com/en/investors/corporate-governance/corporate-governance-declaration>) and Rules of Procedure (attached)

#### (4.1.6) Attach the policy (optional)

2025\_03\_18\_Vonovia SE - Geschäftsordnung AR Stand März\_Final (2).pdf

[Fixed row]

#### (4.1.1) Is there board-level oversight of environmental issues within your organization?

Board-level oversight of this environmental issue	
Climate change	<i>Select from:</i> <input checked="" type="checkbox"/> Yes
Biodiversity	<i>Select from:</i> <input checked="" type="checkbox"/> Yes

[Fixed row]

#### (4.1.2) Identify the positions (do not include any names) of the individuals or committees on the board with accountability for environmental issues and provide details of the board's oversight of environmental issues.

##### Climate change

#### (4.1.2.1) Positions of individuals or committees with accountability for this environmental issue

*Select all that apply*

Chief Executive Officer (CEO)

- Chief Financial Officer (CFO)
- Chief Operating Officer (COO)
- Board-level committee
- Other, please specify :Chief Rental Officer and Chief Development Officer

#### **(4.1.2.2) Positions' accountability for this environmental issue is outlined in policies applicable to the board**

*Select from:*

- Yes

#### **(4.1.2.3) Policies which outline the positions' accountability for this environmental issue**

*Select all that apply*

- Board Terms of Reference

#### **(4.1.2.4) Frequency with which this environmental issue is a scheduled agenda item**

*Select from:*

- Scheduled agenda item in some board meetings – at least annually

#### **(4.1.2.5) Governance mechanisms into which this environmental issue is integrated**

*Select all that apply*

- Reviewing and guiding annual budgets
- Overseeing and guiding scenario analysis
- Overseeing the setting of corporate targets
- Monitoring progress towards corporate targets
- Overseeing and guiding value chain engagement
- Monitoring the implementation of the business strategy
- Overseeing reporting, audit, and verification processes
- Monitoring the implementation of a climate transition plan
- Overseeing and guiding the development of a business strategy
- Overseeing and guiding acquisitions, mergers, and divestitures
- Approving corporate policies and/or commitments
- Overseeing and guiding public policy engagement
- Reviewing and guiding innovation/R&D priorities
- Approving and/or overseeing employee incentives
- Overseeing and guiding major capital expenditures

- Monitoring supplier compliance with organizational requirements
- Monitoring compliance with corporate policies and/or commitments
- Overseeing and guiding the development of a climate transition plan
- Reviewing and guiding the assessment process for dependencies, impacts, risks, and opportunities

#### (4.1.2.7) Please explain

*The Group's climate strategy is coordinated by the Strategy /Corporate Development/Sustainability unit, which reports to the Chief Executive Officer. This unit is responsible for corporate strategy, strategic growths initiatives and the sustainability and climate strategy. In 2024 Vonovia has defined Strategic growth initiatives which are with accelerated technical investments and operate Energy directly linked and contribute to our climate strategy. The Portfolio Management department, which reports to the Chief Rental Officer (CRO), is responsible for coordinating the energy-efficient refurbishment activities. The neighborhoods and buildings to be refurbished are selected in a targeted manner in cooperation with the regions, and the optimal degree of refurbishment and refurbishment roadmap for each building is defined. The investments for the refurbishment programs and photovoltaics expansion are approved by the Management Board. The newly established unit "climate Invest" is responsible for implementing the new concepts of accelerate technical investments: heatpump-cubes and serial-modernization for our buildings. This new unit and the established "Quartierwerk" unit are also part of the Chief Rental Officer's (CRO) executive division, meaning that they are closely linked to the management of the portfolio and responsible for the implementation of Vonovia's "operate energy business": roll-out implementation PV- Programm on our buildings, neighbourhood power plants and selling locally sourced electricity to tenants, and manage energy flow (tenants, heatpumps, storage) via energy management systems in our quarters. The corporate development unit is responsible for innovation, investments in energy innovation startups with focus on energy efficiency e.g. wallround and othermo.*

#### Biodiversity

#### (4.1.2.1) Positions of individuals or committees with accountability for this environmental issue

Select all that apply

- Chief Operating Officer (COO)
- Board-level committee
- Other, please specify :Chief Rental Officer and Chief Development Officer

Select from:

- No

#### (4.1.2.4) Frequency with which this environmental issue is a scheduled agenda item

Select from:

Sporadic – agenda item as important matters arise

#### (4.1.2.5) Governance mechanisms into which this environmental issue is integrated

Select all that apply

Reviewing and guiding the assessment process for dependencies, impacts, risks, and opportunities

Monitoring supplier compliance with organizational requirements

Overseeing and guiding the development of a climate transition plan

#### (4.1.2.7) Please explain

*The protection of biodiversity is part of the Group-wide sustainability strategy, which is coordinated by the Strategy /Corporate Development/Sustainability unit and which reports to the Chief Executive Officer. The management and maintenance of our green spaces and trees (in Germany) is carried out by our Residential Environment Service and selected partner companies. It employs around 1,300 people and is responsible for traditional open space maintenance, upkeep and also implements larger gardening and landscaping projects. The Managing Director of the Residential Environment Service reports to the Chief Rental Officer (CRO). For new buildings, biodiversity and living environment projects are coordinated in the planning and construction process by the Development division, which is the responsibility of the Chief Development Officer (CDO). In order to ensure a consistent focus on biodiversity-promoting measures as early as the planning process, the two divisions have jointly issued an open space planning guideline that sets out a binding procedure for open space planning.*

[Fixed row]

### (4.2) Does your organization's board have competency on environmental issues?

#### Climate change

#### (4.2.1) Board-level competency on this environmental issue

Select from:

Yes

#### (4.2.2) Mechanisms to maintain an environmentally competent board

Select all that apply

Consulting regularly with an internal, permanent, subject-expert working group

- Engaging regularly with external stakeholders and experts on environmental issues
- Integrating knowledge of environmental issues into board nominating process
- Regular training for directors on environmental issues, industry best practice, and standards (e.g., TCFD, SBTi)
- Having at least one board member with expertise on this environmental issue

#### **(4.2.3) Environmental expertise of the board member**

##### Additional training

- Training in an environmental subject by a certified organization, please specify :Regular update on environmental reporting regulations by certified audit company

##### Experience

- Executive-level experience in a role focused on environmental issues
- Management-level experience in a role focused on environmental issues
- Experience in an organization that is exposed to environmental-scrutiny and is going through a sustainability transition

*[Fixed row]*

#### **(4.3) Is there management-level responsibility for environmental issues within your organization?**

Management-level responsibility for this environmental issue

**Climate change**

**(4.3.1.1) Position of individual or committee with responsibility**

Executive level

- Chief Executive Officer (CEO)

**(4.3.1.2) Environmental responsibilities of this position**

Dependencies, impacts, risks and opportunities

- Assessing environmental dependencies, impacts, risks, and opportunities
- Assessing future trends in environmental dependencies, impacts, risks, and opportunities
- Managing environmental dependencies, impacts, risks, and opportunities

Engagement

- Managing engagement in landscapes and/or jurisdictions
- Managing public policy engagement related to environmental issues
- Managing supplier compliance with environmental requirements
- Managing value chain engagement related to environmental issues

Policies, commitments, and targets

- Monitoring compliance with corporate environmental policies and/or commitments
- Measuring progress towards environmental corporate targets
- Measuring progress towards environmental science-based targets
- Setting corporate environmental policies and/or commitments
- Setting corporate environmental targets

Strategy and financial planning

- Developing a climate transition plan

- Implementing a climate transition plan
- Conducting environmental scenario analysis
- Managing annual budgets related to environmental issues
- Implementing the business strategy related to environmental issues
- Developing a business strategy which considers environmental issues
- Managing environmental reporting, audit, and verification processes
- Managing acquisitions, mergers, and divestitures related to environmental issues
- Managing major capital and/or operational expenditures relating to environmental issues
- Managing priorities related to innovation/low-environmental impact products or services (including R&D)

Other

- Providing employee incentives related to environmental performance

#### **(4.3.1.4) Reporting line**

Select from:

- Reports to the board directly

#### **(4.3.1.5) Frequency of reporting to the board on environmental issues**

Select from:

- More frequently than quarterly

#### **(4.3.1.6) Please explain**

*While Vonovia has a dedicated Strategy/ Corporate Development/ Sustainability-Unit, which oversees the overall topic of climate-related issues, there are numerous responsibilities within the organisation based on the specific tasks and expertise within each department (e.g. portfolio management for energy efficient refurbishment, financial controlling for climate risk assessment & EU Taxonomy, residential environment for biodiversity, HR for workforce issues and so forth). The departments are each responsible for the assessment and monitoring of their specific opportunities and risks, including climate-related opportunities and risks. The respective department heads, who report directly to the Management Board, are primarily responsible for this. This allows for a direct line to share climate-related information with the Management Board. At the highest level, the Chief Executive Officer of Vonovia SE is responsible for the issue of sustainability at Vonovia in order to monitor and assess the current performance and projects concerning the (social and) environmental responsibility. The CEO also approves major investments / budget allocations with regard to programmes / initiatives with sustainability focus.*

## Biodiversity

*The protection of biodiversity is part of the Group-wide sustainability strategy. The management and maintenance of our green spaces and trees (in Germany) is carried out by our Residential Environment Service and selected partner companies. It employs around 1,300 people and is responsible for traditional open space maintenance, upkeep and also implements larger gardening and landscaping projects. The Managing Director of the Residential Environment Service reports to the Chief Rental Officer (CRO). For new buildings, biodiversity and living environment projects are coordinated in the planning and construction process by the Development division, which is the responsibility of the Chief Development Officer (CDO). In order to ensure a consistent focus on biodiversity-promoting measures as early as the planning process, the two divisions have jointly issued an open space planning guideline that sets out a binding procedure for open space planning. Both, the CRO and the CDO are both reporting to the Chief Operating Officer, who is responsible for the planning and execution of the biodiversity related activities. [Add row]*

### **(4.5) Do you provide monetary incentives for the management of environmental issues, including the attainment of targets?**

#### **Climate change**

## (4.5.1) Provision of monetary incentives related to this environmental issue

Select from:

Yes

## (4.5.2) % of total C-suite and board-level monetary incentives linked to the management of this environmental issue

11.25

## (4.5.3) Please explain

*In 2021 we have installed a key non-financial performance indicator within our management system which is equal to our financial indicators. Our Sustainability Performance Index (SPI) measures specific targets for sustainability. Climate-related considerations are incorporated into Management Board and top management remuneration via two SPI subindicators: "carbon intensity of the housing stock (Germany)" and "average primary energy demand of new constructions (Group)". The total board remuneration consists of several components including fixed and variable remuneration, which consists of a short-term incentive (STI) and a long term incentive plan (LTIP) and additional remuneration. The SPI represents 25 % of the Long term incentive plan (LTIP). Overall, climate-related considerations are incorporated into long-term variable remuneration at 11.25%. For further details, please see: <https://report.vonovia.com/2024/q4/en/gov-3-sustainability-related-performance-in-incentive-schemes>*

- Progress towards environmental targets
- Achievement of environmental targets
- Organization performance against an environmental sustainability index
- Reduction in absolute emissions in line with net-zero target

#### Emission reduction

- Reduction in emissions intensity

#### Resource use and efficiency

- Energy efficiency improvement
- Reduction in total energy consumption

#### Engagement

- Increased engagement with customers on environmental issues

### (4.5.1.4) Incentive plan the incentives are linked to

#### Select from:

- Long-Term Incentive Plan, or equivalent, only (e.g. contractual multi-year bonus)

### (4.5.1.5) Further details of incentives

*To make our progress in sustainability measurable, we have installed a key non-financial performance indicator within our management system which is equal to our financial indicators. Our Sustainability Performance Index, or SPI, measures specific targets we have set for sustainability. The SPI comprises a total of six core indicators - two of them with an ecological focus: - The CO2 intensity (in kg CO2e/m<sup>2</sup>) of our Scope 1 and Scope 2 emissions across our portfolio, and a portion of our Scope 3 emissions. - Reduction in average primary energy demand per m<sup>2</sup> for newly constructed buildings. Since 2021, the SPI is directly linked to the remuneration system of the Executive Board and the top management below the executive board level (long term incentive plan, LTIP), giving targets for a 4-year time horizon. The remuneration system was approved by the Annual Meeting in 2021, the specific targets are set by the Supervisory Board for each new LTIP period. The Supervisory*

Board also decides upon any changes in the methodology. In the 2024 financial year, a 2024 LTI tranche was granted to the Management Board members. In addition, the four year performance period of the LTI Tranche 2021 ended on December 31, 2024.

#### **(4.5.1.6) How the position's incentives contribute to the achievement of your environmental commitments and/or climate transition plan**

The SPI comprises various sustainability indicators, two with a direct impact on our climate-targets: CO2 intensity (kg CO2e/m<sup>2</sup>) of Scope 1 and 2 and a proportion of Scope 3 emissions, as well as reduction in average energy demand per m<sup>2</sup> in newly constructed buildings. Both KPIs thus pay towards achieving our climate target, e.g. achieving a virtually climate neutral building portfolio by 2045.

#### (4.11.2) Provide details of your indirect engagement on policy, law, or regulation that may (positively or negatively) impact the environment through trade associations or other intermediary organizations or individuals in the reporting year.

Row 1

##### (4.11.2.1) Type of indirect engagement

Select from:

- Indirect engagement via other intermediary organization or individual

##### (4.11.2.2) Type of organization or individual

Select from:

- Non-Governmental Organization (NGO) or charitable organization

##### (4.11.2.3) State the organization or position of individual

*Bundesverband der Energie- und Wasserwirtschaft*

##### (4.11.2.5) Environmental issues relevant to the policies, laws, or regulations on which the organization or individual has taken a position

Select all that apply

- Climate change

#### (4.11.2.6) Indicate whether your organization's position is consistent with the organization or individual you engage with

Select from:

Consistent

#### (4.11.2.7) Indicate whether your organization attempted to influence the organization or individual's position in the reporting year

Select from:

Yes, we attempted to influence them but they did not change their position

#### (4.11.2.8) Describe how your organization's position is consistent with or differs from the organization or individual's position, and any actions taken to influence their position

*Vonovia's position is broadly consistent with BDEW's advocacy for decarbonization and a secure, affordable energy supply. However, Vonovia places stronger emphasis on accelerating building-sector climate neutrality, expanding renovation incentives, and tightening minimum energy performance standards for existing housing. In the reporting year, Vonovia participated in BDEW working groups and consultations to align the association's positions more closely with its own sustainability targets, advocating for faster policy timelines and more robust regulatory frameworks for energy-efficient housing renovation.*

#### (4.11.2.9) Funding figure your organization provided to this organization or individual in the reporting year (currency)

0

#### (4.11.2.11) Indicate if you have evaluated whether your organization's engagement is aligned with global environmental treaties or policy goals

Select from:

Yes, we have evaluated, and it is aligned

#### (4.11.2.12) Global environmental treaties or policy goals aligned with your organization's engagement on policy, law or regulation

Select all that apply

Paris Agreement

## Row 2

### (4.11.2.1) Type of indirect engagement

Select from:

- Indirect engagement via other intermediary organization or individual

### (4.11.2.2) Type of organization or individual

Select from:

- Non-Governmental Organization (NGO) or charitable organization

### (4.11.2.3) State the organization or position of individual

Deutsche Unternehmensinitiative Energieeffizienz DENEFF

### (4.11.2.5) Environmental issues relevant to the policies, laws, or regulations on which the organization or individual has taken a position

Select all that apply

- Climate change

### (4.11.2.6) Indicate whether your organization's position is consistent with the organization or individual you engage with

Select from:

- Consistent

### (4.11.2.7) Indicate whether your organization attempted to influence the organization or individual's position in the reporting year

Select from:

- Yes, we attempted to influence them but they did not change their position

#### (4.11.2.8) Describe how your organization's position is consistent with or differs from the organization or individual's position, and any actions taken to influence their position

Vonovia's position is closely aligned with DENEFF's mission to advance ambitious energy efficiency policies. Both prioritize regulatory and market measures to drive large-scale building retrofits, but Vonovia focuses particularly on ensuring feasibility for large residential portfolios and tenant affordability during upgrades. During the reporting year, Vonovia engaged in DENEFF's policy dialogues and contributed input to joint advocacy campaigns, promoting incentives and regulatory clarity to accelerate deep energy renovations in the housing sector.

#### (4.11.2.9) Funding figure your organization provided to this organization or individual in the reporting year (currency)

10000

#### (4.11.2.10) Describe the aim of this funding and how it could influence policy, law or regulation that may impact the environment

Vonovia is member of the initiative, and pays annual membership fees, as the objectives are closely aligned. Vonovia engaged in DENEFF's policy dialogues and contributed input to joint advocacy campaigns, promoting incentives and regulatory clarity to accelerate deep energy renovations in the housing sector.

#### (4.11.2.11) Indicate if you have evaluated whether your organization's engagement is aligned with global environmental treaties or policy goals

Select from:

Yes, we have evaluated, and it is aligned

#### (4.11.2.12) Global environmental treaties or policy goals aligned with your organization's engagement on policy, law or regulation

Select all that apply

Paris Agreement

### Row 3

#### (4.11.2.1) Type of indirect engagement

Select from:

- Indirect engagement via other intermediary organization or individual

#### (4.11.2.2) Type of organization or individual

Select from:

- Non-Governmental Organization (NGO) or charitable organization

#### (4.11.2.3) State the organization or position of individual

*Deutscher Verband für Wohnungswesen, Städtebau und Raumordnung*

#### (4.11.2.5) Environmental issues relevant to the policies, laws, or regulations on which the organization or individual has taken a position

Select all that apply

- Climate change

#### (4.11.2.6) Indicate whether your organization's position is consistent with the organization or individual you engage with

Select from:

- Consistent

#### (4.11.2.7) Indicate whether your organization attempted to influence the organization or individual's position in the reporting year

Select from:

- Yes, we attempted to influence them but they did not change their position

#### (4.11.2.8) Describe how your organization's position is consistent with or differs from the organization or individual's position, and any actions taken to influence their position

*Vonovia's objectives, achieving a climate-neutral housing stock by 2045 and promoting sustainable, affordable housing, are largely consistent with the DV's focus on integrated urban development and socially balanced housing policy. However, Vonovia places greater emphasis on binding climate and energy performance*

requirements for existing buildings. In the reporting year, Vonovia contributed to DV expert panels and policy recommendations to encourage stronger integration of energy efficiency and climate goals into urban regeneration programs.

#### **(4.11.2.9) Funding figure your organization provided to this organization or individual in the reporting year (currency)**

10000

#### **(4.11.2.10) Describe the aim of this funding and how it could influence policy, law or regulation that may impact the environment**

*Vonovia is member of the association, and pays annual membership fees, as the objectives are mainly aligned but also to advocate for additional efforts. Vonovia contributed to DV expert panels and policy recommendations to encourage stronger integration of energy efficiency and climate goals into urban regeneration programs.*

#### **(4.11.2.11) Indicate if you have evaluated whether your organization's engagement is aligned with global environmental treaties or policy goals**

Select from:

Yes, we have evaluated, and it is aligned

#### **(4.11.2.12) Global environmental treaties or policy goals aligned with your organization's engagement on policy, law or regulation**

Select all that apply

Paris Agreement

### **Row 4**

#### **(4.11.2.1) Type of indirect engagement**

Select from:

Indirect engagement via other intermediary organization or individual

#### **(4.11.2.2) Type of organization or individual**

Select from:

Non-Governmental Organization (NGO) or charitable organization

#### (4.11.2.3) State the organization or position of individual

ZIA Zentraler Immobilien Ausschuss

#### (4.11.2.5) Environmental issues relevant to the policies, laws, or regulations on which the organization or individual has taken a position

Select all that apply

Climate change

#### (4.11.2.6) Indicate whether your organization's position is consistent with the organization or individual you engage with

Select from:

Consistent

#### (4.11.2.7) Indicate whether your organization attempted to influence the organization or individual's position in the reporting year

Select from:

Yes, we attempted to influence them but they did not change their position

#### (4.11.2.8) Describe how your organization's position is consistent with or differs from the organization or individual's position, and any actions taken to influence their position

*Vonovia's long-term climate neutrality target for 2045 and commitment to affordable, sustainable housing is partially aligned with ZIA's promotion of sustainable real estate development and investment frameworks. However, Vonovia advocates for earlier implementation of energy performance requirements for existing buildings and stronger regulatory drivers for deep retrofits than ZIA has currently prioritized. In the reporting year, Vonovia contributed position papers and participated in working groups to push for greater integration of climate targets into ZIA's real estate policy advocacy.*

#### (4.11.2.9) Funding figure your organization provided to this organization or individual in the reporting year (currency)

35000

#### (4.11.2.10) Describe the aim of this funding and how it could influence policy, law or regulation that may impact the environment

*Vonovia is member of the initiative, and pays annual contributions, as the objectives are mainly aligned but also aim to drive the ambitions and efforts further (e.g. stronger regulatory drivers for deep retrofitting). Vonovia contributed to position papers and participated in working groups to push for greater integration of climate targets into ZIA's real estate policy advocacy.*

#### (4.11.2.11) Indicate if you have evaluated whether your organization's engagement is aligned with global environmental treaties or policy goals

*Select from:*

- Yes, we have evaluated, and it is aligned

#### (4.11.2.12) Global environmental treaties or policy goals aligned with your organization's engagement on policy, law or regulation

*Select all that apply*

- Paris Agreement

### Row 5

#### (4.11.2.1) Type of indirect engagement

*Select from:*

- Indirect engagement via other intermediary organization or individual

#### (4.11.2.2) Type of organization or individual

*Select from:*

- Non-Governmental Organization (NGO) or charitable organization

#### (4.11.2.3) State the organization or position of individual

*Initiative Wohnen 2050 e.V.*

#### (4.11.2.5) Environmental issues relevant to the policies, laws, or regulations on which the organization or individual has taken a position

Select all that apply

- Climate change

#### (4.11.2.6) Indicate whether your organization's position is consistent with the organization or individual you engage with

Select from:

- Consistent

#### (4.11.2.7) Indicate whether your organization attempted to influence the organization or individual's position in the reporting year

Select from:

- Yes, we attempted to influence them but they did not change their position

#### (4.11.2.8) Describe how your organization's position is consistent with or differs from the organization or individual's position, and any actions taken to influence their position

*IW2050's aim of climate-neutral housing aligns with Vonovia's overall climate strategy, but Vonovia's target date (2045) is more ambitious than the initiative's 2050 goal. In the reporting year, Vonovia contributed to joint workshops and policy discussions, encouraging the inclusion of accelerated retrofit schedules, stronger integration of renewable energy solutions, and earlier compliance milestones in IW2050's roadmap.*

#### (4.11.2.9) Funding figure your organization provided to this organization or individual in the reporting year (currency)

25000

#### (4.11.2.10) Describe the aim of this funding and how it could influence policy, law or regulation that may impact the environment

*Vonovia is founding member of the initiative, and pays annual contributions, as the objectives are aligned.*

#### (4.11.2.11) Indicate if you have evaluated whether your organization's engagement is aligned with global environmental treaties or policy goals

Select from:

- Yes, we have evaluated, and it is aligned

#### (4.11.2.12) Global environmental treaties or policy goals aligned with your organization's engagement on policy, law or regulation

Select all that apply

- Paris Agreement

### Row 6

#### (4.11.2.1) Type of indirect engagement

Select from:

- Indirect engagement via other intermediary organization or individual

#### (4.11.2.2) Type of organization or individual

Select from:

- Non-Governmental Organization (NGO) or charitable organization

#### (4.11.2.3) State the organization or position of individual

Deutsche Gesellschaft für Nachhaltiges Bauen e.V.

#### (4.11.2.5) Environmental issues relevant to the policies, laws, or regulations on which the organization or individual has taken a position

Select all that apply

- Climate change

#### (4.11.2.6) Indicate whether your organization's position is consistent with the organization or individual you engage with

Select from:

Consistent

#### (4.11.2.7) Indicate whether your organization attempted to influence the organization or individual's position in the reporting year

Select from:

Yes, we attempted to influence them but they did not change their position

#### (4.11.2.8) Describe how your organization's position is consistent with or differs from the organization or individual's position, and any actions taken to influence their position

*Vonovia's climate and sustainability strategy is broadly aligned with DGNB's mission to improve environmental performance across the building sector. Both support high energy efficiency standards, life-cycle carbon reduction, and social sustainability. Vonovia's focus, however, is on ensuring that certification schemes and performance benchmarks are feasible and scalable for large housing portfolios. In the reporting year, Vonovia engaged in DGNB expert panels and consultations to advocate for criteria that balance high ambition with cost-effectiveness and tenant affordability.*

#### (4.11.2.9) Funding figure your organization provided to this organization or individual in the reporting year (currency)

17850

#### (4.11.2.10) Describe the aim of this funding and how it could influence policy, law or regulation that may impact the environment

*Vonovia is member of the association, and pays annual membership fees, as the objectives are mainly aligned. Vonovia contributed to coalition dialogues to promote broader sustainability criteria alongside timber advocacy but Vonovia's target date (2045) is more ambitious than the initiative's 2050 goal. Vonovia contributes to joint workshops and policy discussions, encouraging the inclusion of accelerated retrofit schedules, stronger integration of renewable energy solutions, and earlier compliance milestones in IW2050's roadmap.*

#### (4.11.2.11) Indicate if you have evaluated whether your organization's engagement is aligned with global environmental treaties or policy goals

Select from:

Yes, we have evaluated, and it is aligned

#### (4.11.2.12) Global environmental treaties or policy goals aligned with your organization's engagement on policy, law or regulation

*Select all that apply*

Paris Agreement

### Row 7

#### (4.11.2.1) Type of indirect engagement

*Select from:*

Indirect engagement via other intermediary organization or individual

#### (4.11.2.2) Type of organization or individual

*Select from:*

Non-Governmental Organization (NGO) or charitable organization

#### (4.11.2.3) State the organization or position of individual

*Koalition für Holzbau*

#### (4.11.2.5) Environmental issues relevant to the policies, laws, or regulations on which the organization or individual has taken a position

*Select all that apply*

Climate change

#### (4.11.2.6) Indicate whether your organization's position is consistent with the organization or individual you engage with

*Select from:*

Consistent

#### (4.11.2.7) Indicate whether your organization attempted to influence the organization or individual's position in the reporting year

Select from:

Yes, we attempted to influence them but they did not change their position

#### (4.11.2.8) Describe how your organization's position is consistent with or differs from the organization or individual's position, and any actions taken to influence their position

*Vonovia's climate strategy recognizes the role of timber as a low-carbon building material, aligning with the coalition's promotion of wood construction. However, Vonovia takes a more technology- and material-neutral stance, emphasizing that sustainability outcomes should be assessed through whole-life carbon metrics, cost-effectiveness, and applicability to large-scale housing portfolios. In the reporting year, Vonovia contributed to coalition dialogues to promote broader sustainability criteria alongside timber advocacy.*

#### (4.11.2.9) Funding figure your organization provided to this organization or individual in the reporting year (currency)

0

#### (4.11.2.11) Indicate if you have evaluated whether your organization's engagement is aligned with global environmental treaties or policy goals

Select from:

Yes, we have evaluated, and it is aligned

#### (4.11.2.12) Global environmental treaties or policy goals aligned with your organization's engagement on policy, law or regulation

Select all that apply

Paris Agreement

### Row 8

#### (4.11.2.1) Type of indirect engagement

Select from:

Indirect engagement via other intermediary organization or individual

#### (4.11.2.2) Type of organization or individual

Select from:

Non-Governmental Organization (NGO) or charitable organization

#### (4.11.2.3) State the organization or position of individual

*BDI - Energieeffiziente Gebäude*

#### (4.11.2.5) Environmental issues relevant to the policies, laws, or regulations on which the organization or individual has taken a position

Select all that apply

Climate change

#### (4.11.2.6) Indicate whether your organization's position is consistent with the organization or individual you engage with

Select from:

Consistent

#### (4.11.2.7) Indicate whether your organization attempted to influence the organization or individual's position in the reporting year

Select from:

Yes, we attempted to influence them but they did not change their position

#### (4.11.2.8) Describe how your organization's position is consistent with or differs from the organization or individual's position, and any actions taken to influence their position

*Vonovia's climate and sustainability strategy is broadly aligned with the BDI initiative's mission to improve environmental performance across the building sector. Both support high energy efficiency standards. Vonovia engages in this network to exchange experiences.*

- 2040
- 2080

### (5.1.1.9) Driving forces in scenario

Local ecosystem asset interactions, dependencies and impacts

Climate change (one of five drivers of nature change)

Regulators, legal and policy regimes

Global regulation

### **(5.1.1.10) Assumptions, uncertainties and constraints in scenario**

*Physical climate scenarios are part of our overarching climate scenario analysis assessing the impact of various hazards — for example heat stress and temperature increase, drought, heavy precipitation, flooding and storms — in different time horizons until 2030, 2045 and 2085 (selected 2040 and 2080, due to missing options). Since 2022 Vonovia has been using an IT tool in accordance with EU taxonomy requirements in order to analyze the physical risks associated with climate change. This tool enables physical climate risks to be identified and evaluated for the Group-wide portfolio on a continuous basis using the prescribed climate scenarios (RCP2.6, RCP4.5 and RCP8.5). This climate risk tool covers Vonovia's portfolio and development projects in Germany, Austria and Sweden and allows material negative impacts on our business activities due to the effects of climate change to be analyzed at portfolio and property level. The climate risks examined using this tool are heat, cold, drought, increases in precipitation, wind and storms, snow loads and flooding. Depending on the granularity of the available data source, we measure climate risks at the building or neighborhood level and are able to complete a climate risk assessment for each building in the portfolio. Vonovia's scenario analysis is subject to inherent assumptions, uncertainties, and limitations. One limitation stems from the model employed, as climate models possess their own limitations and uncertainties, including the precision of the model's assumptions and parameters. Additionally, the complexity of the climate system, which is challenging to encapsulate within a model, contributes to these limitations. General uncertainty regarding future emissions, limited understanding of certain climate-related processes such as tipping points, the unpredictable reactions of policymakers to climate issues, and the future utilization of technologies and dependable pricing further compound these uncertainties.*

### **(5.1.1.11) Rationale for choice of scenario**

*Vonovia uses generally established and science-based scenarios for their analysis. The SSP-RCP scenarios (RCP 2.6, 4.5, 8.5 and SSP1, 2 and 5) of the IPCC are used for the physical climate scenarios. Vonovia has thereby integrated multiple important scenarios that are relevant for a comprehensive analysis and the resilience of our organization's business strategy.*

Local ecosystem asset interactions, dependencies and impacts

- Climate change (one of five drivers of nature change)

Regulators, legal and policy regimes

- Global regulation

## (5.1.1.10) Assumptions, uncertainties and constraints in scenario

We have developed a climate path with binding targets for 2030 and 2045 as well as annual interim steps with the scientific support of the Fraunhofer Institute ISE to evaluate the effectiveness of these measures. This plan is based on the federal government's targets for climate neutrality in the real estate sector for 2030 and 2045. In addition we considered the scientific trajectory defined by the Carbon Risk Real Estate Monitor (CRREM). We assumed an energy transition scenario from the think Tank Agora Energiewende which defined the necessary transformation to achieve a climateneutral economy in Germany. Climate-neutral scenario: innovations are required in order to make the full transition to climate neutrality at a reasonable cost. Decentralized power generation and local consumption in the neighborhoods will define the energy transition. The focus must therefore be on increasing the use of renewable energies (fuel switch) and the corresponding neighborhood systems. The power supply has a vital role to play in terms of sector integration. Integrating the power, heat and transport sectors (sector coupling) can significantly boost the efficiency and autonomy of a housing estate. In the future, community development plans will focus on generating green power and green heat in a neighborhood for local consumption, or at the very least using green district heating to provide a climate-friendly heat supply. The energy concept is backed up by infrastructure for sustainable mobility solutions. Vonovia's scenario analysis is subject to inherent assumptions, uncertainties, and limitations. One limitation stems from the model employed, as climate models possess their own limitations and uncertainties, including the precision of the model's assumptions and parameters. Additionally, the complexity of the climate system, which is challenging to encapsulate within a model, contributes to these limitations. General uncertainty regarding future emissions, limited understanding of certain climate-related processes such as tipping points, the unpredictable reactions of policymakers to climate issues, and the future utilization of technologies and dependable pricing further compound these uncertainties.

## (5.1.1.11) Rationale for choice of scenario

Vonovia developed a climate path with binding targets for 2030 and 2045 as well as annual interim steps with the scientific support of the Fraunhofer Institute ISE to evaluate the effectiveness of these measures. Those scientific targets were complemented by using the Carbon Risk Real Estate Monitor (CRREM) and "right-based

on science" and using of their XDC model. This was done to achieve three different scenarios (standard, hybrid and climate-neutral). Vonovia has thereby integrated multiple important scenarios that are relevant for a comprehensive analysis and the resilience of our organization's business strategy.  
[Add row]

## (5.1.2) Provide details of the outcomes of your organization's scenario analysis.

### Climate change

#### (5.1.2.1) Business processes influenced by your analysis of the reported scenarios

Select all that apply

- Risk and opportunities identification, assessment and management
- Strategy and financial planning
- Resilience of business model and strategy
- Capacity building
- Target setting and transition planning

#### (5.1.2.2) Coverage of analysis

Select from:

- Organization-wide

#### (5.1.2.3) Summarize the outcomes of the scenario analysis and any implications for other environmental issues

*Transitory scenario analysis: As a result of our scenario analysis we defined a target for the carbon intensity of our building stock in germany which is to achieve net-zero emissions by 2045 (below 5 kg CO2e/m<sup>2</sup> of rentable area per year, residual emissions are to be compensated). The resulting climate plan shows clearly that multiple measures are required in order to achieve climate neutrality by 2045. We analyzed several scenarios that indicated that refurbishment, both as currently practiced and in a more intensive form, is not enough. The required climate trajectory can only be achieved by combining higher energy efficiency, a much greater share of renewable energy sources in the energy supply and further innovative technologies to produce and store energy on a decentralized basis in neighborhoods. Developing the climate plan showed us how important it is for us to find solutions that go beyond conventional modernization measures. We are focusing on the intelligent networking of heat and power in our neighborhoods and technological developments to make buildings more energy-efficient. Vonovia uses projects to investigate and test potential solutions at a reasonable cost. We are dedicated to developing new fields of business related to energy generation, storage, distribution and mobility. This also includes implementing pilot projects in cooperation with partners from various disciplines. The Climate-neutral Portfolio/Strategic Projects department is responsible for strategic planning to prepare the path to a climate-neutral portfolio by 2045. Physical scenario analysis: Crises or disasters such as floods, earthquakes, extreme weather events, etc., could have an impact on our real estate portfolio and require specific crisis management measures. Physical*

climate risks like these refer to longer-term shifts in general climatic conditions. We have assessed the risk from extreme weather events with a potential loss of € 5-50 million (over a 5 year period) and a likelihood of "likely". As long as these risks remain insurable, we do not see physical hazards as a big threat to our business. However, it remains an important factor to consider for future risk and scenario analysis, to continuously update results with latest scientific knowledge.  
[Fixed row]

## (5.2) Does your organization's strategy include a climate transition plan?

### (5.2.1) Transition plan

Select from:

Yes, we have a climate transition plan which aligns with a 1.5°C world

### (5.2.3) Publicly available climate transition plan

Select from:

Yes

### (5.2.4) Plan explicitly commits to cease all spending on, and revenue generation from, activities that contribute to fossil fuel expansion

Select from:

No, and we do not plan to add an explicit commitment within the next two years

### (5.2.6) Explain why your organization does not explicitly commit to cease all spending on and revenue generation from activities that contribute to fossil fuel expansion

Vonovia commits to a carbon-neutral housing stock by 2045. This includes changing heating systems powered by fossil fuels to zero-carbon heating systems like heat pumps powered by electricity from renewables. This change will take time (21 years) in which revenues will come from buildings powered by fossil fuels.

### (5.2.7) Mechanism by which feedback is collected from shareholders on your climate transition plan

Select from:

- We have a different feedback mechanism in place

### **(5.2.8) Description of feedback mechanism**

*We have committed to our climate path with binding climate targets on the way to a climate-neutral building stock by 2045. To achieve the targets set out in this climate path, we have created the Sustainability Performance Index (SPI). This SPI consists of six different sustainability indicators - including the CO2 intensity of the existing building stock and the primary energy requirement for new buildings. These are provided with specific annual targets. The SPI is part of the management system as well as an integral part of the remuneration system of the Management Board and the Top management level (Long term incentive plan, LTIP). A decision on this remuneration system was taken at the 2021 AGM. The CO2-intensity is monitored and forecast at least on a quarterly basis.*

### **(5.2.9) Frequency of feedback collection**

Select from:

- More frequently than annually

### **(5.2.10) Description of key assumptions and dependencies on which the transition plan relies**

*In our business strategy, the transformation plan for our housing stock, our climate path, is structured around three key levers: 1. Energy savings through energy-efficient refurbishment of the building envelope 2. Increasing the share of renewable energies in the neighborhood and 3. Comprehensive transformation of the energy sector. Vonovia operationalizes its transformation plan using the Decarbonization Tool (DCT), which evaluates its housing stock based on ecological and economic criteria. The DCT prioritizes refurbishment initiatives for individual buildings over time, consolidating them into a comprehensive plan. Economic viability and emissions reduction are closely intertwined elements of this strategic process. The outcome of this prioritization is detailed further in energy-efficient refurbishment plans and energy concepts. We adopt a holistic approach at the neighborhood level, considering both building envelope upgrades (such as facade insulation, basement ceiling and attic insulation, and window replacement) and the transition to climate-friendly energy systems within a broader context. Our strategy follows a phased development approach, adjusting the timing of measures based on the initial energy efficiency status of buildings to meet the 2045 targets outlined in our climate pathway. In terms of implementation, tailored and economically feasible concepts are devised for scalable solutions, focusing on integrating the heat, electricity, and mobility sectors.*

### **(5.2.11) Description of progress against transition plan disclosed in current or previous reporting period**

*The central indicator for managing our climate protection performance is the CO2 intensity of our housing portfolio. It is also a crucial component of the Sustainability Performance Index (SPI) and thereby influences corporate governance and the compensation of top executives. In the reporting year, the CO2 intensity for our housing stock in Germany was 31.2 kg CO2e/m<sup>2</sup> of rental area, down by around 1.6% year-on-year (2023: 31.7 kg CO2e/m<sup>2</sup>) and 2.5% below the target for the reporting year (32.0).*

### **(5.2.12) Attach any relevant documents which detail your climate transition plan (optional)**

### (5.2.13) Other environmental issues that your climate transition plan considers

Select all that apply

- No other environmental issue considered

[Fixed row]

## (5.3) Have environmental risks and opportunities affected your strategy and/or financial planning?

### (5.3.1) Environmental risks and/or opportunities have affected your strategy and/or financial planning

Select from:

- Yes, both strategy and financial planning

### (5.3.2) Business areas where environmental risks and/or opportunities have affected your strategy

### (5.3.1.2) Environmental issues relevant to the risks and/or opportunities that have affected your strategy in this area

Select all that apply

Climate change

### (5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

*The insight that energy-efficient renovations of the building envelope are not sufficient to achieve the goal of a climate-neutral building stock by 2045 has led to our Strategy for Decarbonizing the Housing Stock and an update of our growth strategy in 2024: our GHG emission reduction strategy which is based on three pillars: 1. increasing energy efficiency through energy-efficient refurbishment of the building envelope (facades, basement ceilings and attics, the replacement of windows and the installation of new heating boilers), 2. Increasing the share of renewable energies in the neighborhood (exchange of conventional heating systems with heat-pumps or district heating) and 3. Comprehensive transformation of the energy sector. In 2024, we modernized around 6,800 units and achieved a refurbishment rate of around 1.3% in our German portfolio. Additionally, we replaced heating systems in around 500 units in the reporting year. As part of our growth strategy defined in 2024, we are driving and accelerating additional initiatives until 2028 to support our GHG reduction strategy: increased investments in serial refurbishment (an industrialized system that bundles and standardizes all steps in the refurbishment process), in the new concept "heat pump cube" (a heat pump center that combines all the necessary components in an external module and is installed on-site outside the building) and in accelerated installation of PV on our buildings (installed capacity of 400 MWp until 2028 and up to 700 MWp in the long term). All activities result in an aggregated long-term investment plan with an average investment of around €800 mn p.a. in the next 5 years, or a total investment in this period of around €4 bn. The strategy addresses our climate related (transitional & physical) risks and opportunities.*

## Upstream/downstream value chain

### (5.3.1.1) Effect type

Select all that apply

Risks

Opportunities

### (5.3.1.2) Environmental issues relevant to the risks and/or opportunities that have affected your strategy in this area

Select all that apply

Climate change

### (5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

The risk of climate-related emerging and current regulations, as well as changing customer behavior towards more climate-friendly living options has led to a comprehensive consideration of climate-relevant parameters in our supply chain and construction work in short- to long-term time horizons: We evaluated the ecological effects of different construction methods, from reinforced concrete to solid wood construction. Also, with the expansion of our building activities, the importance of the building materials used is also increasing. Concrete in particular is a CO2-intensive building material, but other materials also play a role in the climate balance. Therefore, we decided to - on a mandatory basis - analyze total footprint early in project planning and capture footprints for various materials and construction types. Substantial strategic decision: The expansion of the development business is an important part of our strategy. Vonovia's new construction activities are focused on a product portfolio that is geared toward market requirements with flexibility in how the properties are used (Development to hold/Development to sell). In light of the ongoing need to optimize construction costs, Vonovia is focusing on the "Basic House" approach, among other things, in order to build sustainable and affordable housing for different target groups. The emphasis is on new projects employing serial modular timber construction methods together with the company's joint venture partner Gropius. Additionally, Vonovia initiated a Construction Contest in 2024 to identify innovative construction materials which can contribute to carbon reductions in new constructions.

## Investment in R&D

### (5.3.1.1) Effect type

Select all that apply

- Risks

### (5.3.1.2) Environmental issues relevant to the risks and/or opportunities that have affected your strategy in this area

Select all that apply

- Climate change

### (5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

In striving to achieve a climate-neutral building stock by 2045, Vonovia has defined its neighborhoods as a central focal point. Innovation and a holistic view of neighborhoods in terms of social, ecological and economic factors are crucial when it comes to mastering the energy revolution. The change in strategy towards more research and innovation is clearly based on the realization that we cannot achieve our climate targets using conventional methods. Vonovia is therefore investing in numerous research and development projects to test both neighborhood-based supply approaches (e.g., with hydrogen) and new technologies to further increase efficiency. Substantial strategic decision: Energy-efficiency modernization to improve energy efficiency is an essential pillar of Vonovia's climate pathway. Using our decarbonization tool (DCT), an overall plan is prepared featuring an individual energy refurbishment and energy concept solution plan for each specific building. The energy efficiency measures, in particular insulating facades, cellar ceilings and lofts, and replacing windows, are implemented as part of the Upgrade Buildings investment program. In order to make energy-efficient building refurbishment even more cost-effective in the medium and long term, we continued to forge ahead further with serial refurbishment in the reporting year. Vonovia has introduced serial refurbishment (an industrialized system that bundles and standardizes all steps in the refurbishment process) This concept of serial refurbishment allows for more scaleable and faster modernization contributing to the realization of a net zero

housing stock. First pilot projects have already been realized in Witten and Bochum, with an investment of 18 mln EUR. Another measure involves the digitalization of heat supply. In the reporting year, more than 2,200 gas-fired heating systems had already been connected to a digital solution developed in collaboration with the start-up Othermo, which detects heating system failures in real time and supports optimized adjustments to the system technology. This system offers the potential to save around 15% in energy and CO2, with direct benefits for our tenants. Another aspect of implementing the climate pathway is increasing energy generation from renewable sources e.g. heat pump initiative and the new concept "heat pump cube" (a heat pump center that combines all the necessary components in an external module and is installed on-site outside the building)

- Climate change

### (5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

Our own business operations account for only around 3% of our company's CO2 emissions (Scope 1-2). 97% are generated by the operation of the building portfolio, mainly through the heat consumption of our tenants. We take care to optimize our business processes internally in order to save resources as much as possible. Our vehicle fleet, our tools and appliances, our own office buildings and the behavior of our employees all offer opportunities to make a difference, e.g., by transitioning the fleet to low-emission vehicles, using power-saving electrical appliances for work in neighborhoods, buying green power for office buildings and avoiding business travel and transport. In this respect, climate-related developments also have a - albeit small - influence on the corporate strategy in terms of greater awareness at the operational level for resource-efficient measures. Substantial strategic impact: The company is also working towards using and generating energy in a manner which is better for the environment by switching all of the administrative buildings that it owns over to green electricity provided by VESG. This switchover started on January 1, 2022, with around 60 sites concentrated in the South region. In the future, all of these sites will be supplied with carbon-free green electricity. All office locations of BUWOG in Austria have used certified green electricity (UZ46) since 2021. In addition to improving our carbon footprint, this also optimizes our internal processes and are implementing ISO 50001 certification for all energy-relevant office and operations locations in 2025. Even earlier we completed a DIN EN 16247-1 energy audit in Germany in 2020. The areas that were identified for improvement can be applied to the entire Group due to the homogeneity of asset structures and consumption patterns at Vonovia. One of our focus areas in 2021 was the switch to using battery-powered garden tools, e.g., leaf blowers and hedge trimmers. We plan to replace around 1,000 gasoline-powered tools with more environmentally friendly battery-powered versions. The new appliances will be highly recyclable and have significantly lower carbon and noise emissions, which will also benefit our tenants and improve the health of our employees.

- Direct costs
- Capital expenditures

#### (5.3.2.2) Effect type

Select all that apply

- Risks
- Opportunities

#### (5.3.2.3) Environmental issues relevant to the risks and/or opportunities that have affected these financial planning elements

Select all that apply

- Climate change

#### (5.3.2.4) Describe how environmental risks and/or opportunities have affected these financial planning elements

Vonovia's climate path for achieving a climate-neutral housing stock is based on three pillars: 1. increasing energy efficiency through energy-efficient refurbishment of the building envelope (facades, basement ceilings and attics, the replacement of windows and the installation of new heating boilers), 2. Increasing the share of renewable energies in the neighborhood (exchange of conventional heating systems with heat-pumps or district heating) and 3. Comprehensive transformation of the energy sector. This has an impact on the company's financial planning: - Continued high levels of investment in energy modernization. The introduction of a CO2 price in the building sector has a steering effect here, as financial flows are diverted to the modernization of buildings with particularly high emissions. At the same time, investing in energy modernization can also increase revenues, because it creates an opportunity in terms of cost savings and preparation for future developments (e.g. higher costs through taxes). - Replacement of outdated fossil-fuel boilers with modern heating systems. Here, too, investment levels are expected to grow, having an impact on direct costs. - Strong expansion of investments in renewable energies: On the one hand, in the expansion of solar systems, heat pumps, etc., and on the other hand, above all, in the expansion of neighborhood systems that intelligently link the areas of electricity, heating and mobility via sector coupling.

Vonovia has therefore significantly increased its investment volume in the research and development of new technologies and set up a new research and development department with around 20 employees. - In the area of new construction, Vonovia is investing significantly more in sustainable new construction due to the risks and opportunities arising from climate-related issues. This includes intelligent water management systems as well as high efficiency standards for the new buildings or the development of suitable mobility systems such as car and cargo bike sharing or electric mobility. - In the residential environment, long-term forecasts for changing climatic conditions are leading, for example, to the expansion of water retention systems and changes to more climate-resistant trees and shrubs. All activities result in an aggregated long-term investment plan with an average investment of around €800 mn p.a. in the next 5 years, or a total investment in this period of around €4 bn.

*Vonovia has not defined strategic objectives for financial metrics aligned with EU Taxonomy by 2025 or 2030. We plan to continuously improve our current degree of EU Taxonomy alignment. In order to determine the key figures (KPIs) that are to be reported, the taxonomy-eligible and taxonomy-aligned net turnover, capital expenditure and operating expenses are calculated as a share of the total net turnover, capital expenditure and operating expenses that are to be taken into account in accordance with EU taxonomy requirements. The definition of each KPI is based on Annex I of the Delegated Act on Article 8 on the content and presentation of the information to be disclosed. When it comes to capital expenditure, the EU Taxonomy Regulation makes a distinction between different categories of capital expenditure. Due to Vonovia's business model, it largely invests (activity 7.2. and 7.7.) in assets or processes associated with economic activities that are taxonomy aligned (category A). It also makes investments (activity 7.3.–7.6.) relating to the acquisition of products from taxonomy-eligible economic activities and individual measures, through which the target activities are carried out in a low-carbon manner or the emission of greenhouse gases is lowered (category C). Duplicate counting is avoided by means of direct allocation of the taxonomy-eligible or taxonomy-aligned turnover, capital expenditure and operating expenses to a taxonomy-eligible or taxonomy-aligned economic activity. As in the previous year, turnover from the condominium administration business, energy sales from energy trading activities, and multimedia are not taxonomy-eligible. The Care segment is no longer reported under turnover for the 2023 fiscal year, but rather separately as a discontinued operation. Please find detailed information on the calculation methodology and supporting information in our Annual Report 2024.*

## (5.4.2.28) Substantial contribution criteria met

Select from:

Yes

## (5.4.2.29) Details of substantial contribution criteria analysis

Turnover associated with new construction (activity 7.1) is deemed taxonomy-aligned if the relevant buildings have a primary energy demand that is at least 10% below the national standard for nearly zero-energy buildings. Vonovia checks compliance by obtaining an energy performance certificate for each building. The relevant buildings undergo the thermal integrity and airtightness test. Where required to do so, Vonovia determines the global warming potential for each phase of the building life cycle (for buildings with an area of > 5,000 sqm) using a model calculation of life cycle emissions based on emission factors that have been determined for different types of construction.

## (5.4.2.30) Do no significant harm requirements met

Select from:

Yes

## (5.4.2.31) Details of do no significant harm analysis

For a detailed overview, please see our Annual Report 2024, p.80. Objective 2 Climate Change Adaptation: Vonovia uses an IT tool for continuous climate risk and vulnerability assessments across the Group-wide portfolio, employing scenarios RCP2.6, RCP4.5, and RCP8.5. Based on RCP4.5, no material risk for climate-related hazards was identified up to 2045, eliminating the need for an adaptation plan. Future adaptations will be defined and implemented at the portfolio level where material risks exist. Objective 3 Water and marine resources: No criteria need to be assessed, as these do not apply to taxonomy-alignment of residential building units. Objective 4 Waste: The requirements are met through the implementation of the German Circular Economy Act (KrWG)/national legislation, and are passed on to business partners by Vonovia through the Business Partner Code and the General Terms and Conditions of Contract for Construction Services, as well as being included in framework agreements with waste disposal companies. This ensures that the requirements are implemented for each project. The selected building and construction technology strengthens resource efficiency, adaptability and dismantling capacity, taking into account the requirements set out in the ISO 20887 standard. The photovoltaic systems installed by Vonovia also meet the requirements for preventing significant harm to EU environmental objective 4 on account of their design and service life. Objective 5 Pollution: Compliance with EU directives is mandated by law in DE, AT, SE. Vonovia only uses CE-marked construction products that conform to EU legislation. The Business Partner Code requires all subcontractors and suppliers to comply. The additional paragraph (Appendix C, substances relevant for CLP Regulation), has been reviewed by Vonovia. The relevant substances are adhesives or foams used in individual cases in construction or renovation work. The maximum mass concentration of hazardous substances of 0.1% that has been defined for mixtures of these products is not exceeded. Substances are no longer hazardous in their ultimate form, eg hardened foam, dried adhesive. Objective 6 Biodiversity: Vonovia's economic activities do not significantly harm the achievement of protection and restoration of biodiversity and ecosystems, as Vonovia only builds in designated areas. Relevant aspects are taken into account by the competent authorities in the approval procedures preceding such activities.

## (5.4.2.28) Substantial contribution criteria met

Select from:

Yes

## (5.4.2.29) Details of substantial contribution criteria analysis

Turnover generated from the acquisition and ownership of buildings (activity 7.7) is deemed taxonomy-aligned if the buildings constructed before December 31, 2020, have been assigned energy efficiency class A (or better) or, alternatively, are among the top 15 percent of regional or national housing stock in terms of primary energy demand in operation. Vonovia checks compliance by obtaining an energy performance certificate for each building. We base our assessment of the top 15 percent on relevant threshold values for primary energy demand for Germany, Austria and Sweden, which were determined in a recent benchmark study. The study was updated for Germany in the 2023 fiscal year and the new threshold (lower and, as a result, more restrictive than in the previous year) was applied for the first time for the 2024 reporting year. For buildings constructed after December 31, 2020, the same criteria for substantial contribution to climate change mitigation apply as for new construction (activity 7.1).

## (5.4.2.30) Do no significant harm requirements met

Objective 4 Waste: The requirements are met through the implementation of the German Circular Economy Act (KrWG)/national legislation, and are passed on to business partners by Vonovia through the Business Partner Code and the General Terms and Conditions of Contract for Construction Services, as well as being included in framework agreements with waste disposal companies. This ensures that the requirements are implemented for each project. The selected building and construction technology strengthens resource efficiency, adaptability and dismantling capacity, taking into account the requirements set out in the ISO 20887 standard. The photovoltaic systems installed by Vonovia also meet the requirements for preventing significant harm to EU environmental objective 4 on account of their design and service life. Objective 5 Pollution: Compliance with EU directives is mandated by law in DE, AT, SE. Vonovia only uses CE-marked construction products that conform to EU legislation. The Business Partner Code requires all subcontractors and suppliers to comply. The additional paragraph (Appendix C, substances relevant for CLP Regulation), has been reviewed by Vonovia. The relevant substances are adhesives or foams used in individual cases in construction or renovation work. The maximum mass concentration of hazardous substances of 0.1% that has been defined for mixtures of these products is not exceeded. Substances are no longer hazardous in their ultimate form, eg hardened foam, dried adhesive. Objective 6 Biodiversity: Vonovia's economic activities do not significantly harm the achievement of protection and restoration of biodiversity and ecosystems, as Vonovia only builds in designated areas. Relevant aspects are taken into account by the competent authorities in the approval procedures preceding such activities.

### (5.4.2.27) Calculation methodology and supporting information

*In order to determine the key figures (KPIs) that are to be reported, the taxonomy-eligible and taxonomy-aligned net turnover, capital expenditure and operating expenses are calculated as a share of the total net turnover, capital expenditure and operating expenses that are to be taken into account in accordance with EU taxonomy requirements. The definition of each KPI is based on Annex I of the Delegated Act on Article 8 on the content and presentation of the information to be disclosed. When it comes to capital expenditure, the EU Taxonomy Regulation makes a distinction between different categories of capital expenditure. Due to Vonovia's business model, it largely invests (activity 7.2. and 7.7.) in assets or processes associated with economic activities that are taxonomy-aligned (category A). It also makes investments (activity 7.3.–7.6.) relating to the acquisition of products from taxonomy-eligible economic activities and individual measures, through which the target activities are carried out in a low-carbon manner or the emission of greenhouse gases is lowered (category C). Duplicate counting is avoided by means of direct allocation of the taxonomy-eligible or taxonomy-aligned turnover, capital expenditure and operating expenses to a taxonomy-eligible or taxonomy-aligned economic activity. As in the previous year, turnover from the condominium administration business, energy sales from energy trading activities, and multimedia are not taxonomy-eligible.*

### (5.4.2.29) Details of substantial contribution criteria analysis

*At Vonovia, capital expenditure associated with the renovation of existing buildings (activity 7.2) always relates to energy-efficient modernization. Vonovia verifies the required 10% reduction in primary energy demand through energy-efficiency assessments or based on energy certificates. Capital expenditure as part of energy-efficient modernization projects is allocated to activity 7.2.*

### (5.4.2.30) Do no significant harm requirements met

Yes

### (5.4.2.31) Details of do no significant harm analysis

For a detailed overview, please see our Annual Report 2024, p.80. Objective 2 Climate Change Adaptation: Vonovia uses an IT tool for continuous climate risk and vulnerability assessments across the Group-wide portfolio, employing scenarios RCP2.6, RCP4.5, and RCP8.5. Based on RCP4.5, no material risk for climate-related hazards was identified up to 2045, eliminating the need for an adaptation plan. Future adaptations will be defined and implemented at the portfolio level where material risks exist. Objective 3 Water and marine resources: No criteria need to be assessed, as these do not apply to taxonomy-alignment of residential building units. Objective 4 Waste: The requirements are met through the implementation of the German Circular Economy Act (KrWG)/national legislation, and are passed on to business partners by Vonovia through the Business Partner Code and the General Terms and Conditions of Contract for Construction Services, as well as being included in framework agreements with waste disposal companies. This ensures that the requirements are implemented for each project. The photovoltaic systems installed by Vonovia also meet the requirements for preventing significant harm to EU environmental objective 4 on account of their design and service life. Objective 5 Pollution: Compliance with EU directives is mandated by law in DE, AT, SE. Vonovia only uses CE-marked construction products that conform to EU legislation. The Business Partner Code requires all subcontractors and suppliers to comply. The additional paragraph (Appendix C, substances relevant for CLP Regulation), has been reviewed by Vonovia. The relevant substances are adhesives or foams used in individual cases in construction or renovation work. The maximum mass concentration of hazardous substances of 0.1% that has been defined for mixtures of these products is not exceeded. Substances are no longer hazardous in their ultimate form, eg hardened foam, dried adhesive. Objective 6 Biodiversity: Vonovia's economic activities do not significantly harm the achievement of protection and restoration of biodiversity and ecosystems, as Vonovia only builds in designated areas. Relevant aspects are taken into account by the competent authorities in the approval procedures preceding such activities.

### (5.4.2.27) Calculation methodology and supporting information

In order to determine the key figures (KPIs) that are to be reported, the taxonomy-eligible and taxonomy-aligned net turnover, capital expenditure and operating expenses are calculated as a share of the total net turnover, capital expenditure and operating expenses that are to be taken into account in accordance with EU taxonomy requirements. The definition of each KPI is based on Annex I of the Delegated Act on Article 8 on the content and presentation of the information to be disclosed. When it comes to capital expenditure, the EU Taxonomy Regulation makes a distinction between different categories of capital expenditure. Due to Vonovia's business model, it largely invests (activity 7.2. and 7.7.) in assets or processes associated with economic activities that are taxonomy-aligned (category A). It also makes investments (activity 7.3.–7.6.) relating to the acquisition of products from taxonomy-eligible economic activities and individual measures, through which the target activities are carried out in a low-carbon manner or the emission of greenhouse gases is lowered (category C). Duplicate counting is avoided by means of direct allocation of the taxonomy-eligible or taxonomy-aligned turnover, capital expenditure and operating expenses to a taxonomy-eligible or taxonomy-aligned economic activity. As in the previous year, turnover from the condominium administration business, energy sales from energy trading activities, and multimedia are not taxonomy-eligible.

#### **(5.4.2.28) Substantial contribution criteria met**

Select from:

Yes

#### **(5.4.2.29) Details of substantial contribution criteria analysis**

In accordance with Vonovia's business model, the relevant criteria for determining taxonomy-aligned operating expenses stem from activity 7.7. This is non-capitalized maintenance (usually minor maintenance). In addition to maintenance services provided by third parties, this also includes services provided internally by the company's own craftsmen's organization. The denominator therefore covers expenses for upkeep and repair (maintenance) including technicians' and administrative costs of the internal craftsmen's organization. Vonovia uses an allocation factor to determine the taxonomy-aligned data. This allocation factor for maintenance expenses is based on the area of the building (in square meters). This share is multiplied by the taxonomy-eligible operating expenses to calculate the numerator. The share of green sqm in relation to the total area is 14.6%. The increase as against the previous year (12.9%) is due to a higher proportion of taxonomy-aligned buildings.

#### **(5.4.2.30) Do no significant harm requirements met**

Select from:

Yes

#### **(5.4.2.31) Details of do no significant harm analysis**

For a detailed overview, please see our Annual Report 2024, p.80. Objective 2 Climate Change Adaptation: Vonovia uses an IT tool for continuous climate risk and vulnerability assessments across the Group-wide portfolio, employing scenarios RCP2.6, RCP4.5, and RCP8.5. Based on RCP4.5, no material risk for climate-related hazards was identified up to 2045, eliminating the need for an adaptation plan. Future adaptations will be defined and implemented at the portfolio level where material risks exist. Objective 3 Water and marine resources: No criteria need to be assessed, as these do not apply to taxonomy-alignment of residential building

units. **Objective 4 Waste:** The requirements are met through the implementation of the German Circular Economy Act (KrWG)/national legislation, and are passed on to business partners by Vonovia through the Business Partner Code and the General Terms and Conditions of Contract for Construction Services, as well as being included in framework agreements with waste disposal companies. This ensures that the requirements are implemented for each project. The selected building and construction technology strengthens resource efficiency, adaptability and dismantling capacity, taking into account the requirements set out in the ISO 20887 standard. The photovoltaic systems installed by Vonovia also meet the requirements for preventing significant harm to EU environmental objective 4 on account of their design and service life. **Objective 5 Pollution:** Compliance with EU directives is mandated by law in DE, AT, SE. Vonovia only uses CE-marked construction products that conform to EU legislation. The Business Partner Code requires all subcontractors and suppliers to comply. The additional paragraph (Appendix C, substances relevant for CLP Regulation), has been reviewed by Vonovia. The relevant substances are adhesives or foams used in individual cases in construction or renovation work. The maximum mass concentration of hazardous substances of 0.1% that has been defined for mixtures of these products is not exceeded. Substances are no longer hazardous in their ultimate form, eg hardened foam, dried adhesive. **Objective 6 Biodiversity:** Vonovia's economic activities do not significantly harm the achievement of protection and restoration of biodiversity and ecosystems, as Vonovia only builds in designated areas. Relevant aspects are taken into account by the competent authorities in the approval procedures preceding such activities.

#### (5.4.2.29) Details of substantial contribution criteria analysis

Turnover associated with new construction (activity 7.1) is deemed taxonomy-aligned if the relevant buildings have a primary energy demand that is at least 10% below the national standard for nearly zero-energy buildings. Vonovia checks compliance by obtaining an energy performance certificate for each building. The relevant buildings undergo the thermal integrity and airtightness test. Where required to do so, Vonovia determines the global warming potential for each phase of the building life cycle (for buildings with an area of > 5,000 sqm) using a model calculation of life cycle emissions based on emission factors that have been determined for different types of construction.

#### **(5.4.2.29) Details of substantial contribution criteria analysis**

Turnover generated from the acquisition and ownership of buildings (activity 7.7) is deemed taxonomy-aligned if the buildings constructed before December 31, 2020, have been assigned energy efficiency class A (or better) or, alternatively, are among the top 15 percent of regional or national housing stock in terms of primary energy demand in operation. Vonovia checks compliance by obtaining an energy performance certificate for each building. We base our assessment of the top 15 percent on relevant threshold values for primary energy demand for Germany, Austria and Sweden, which were determined in a recent benchmark study. For buildings constructed after December 31, 2020, the same criteria for substantial contribution to climate change mitigation apply as for new construction (activity 7.1).

0

#### (5.4.2.27) Calculation methodology and supporting information

*In order to determine the key figures (KPIs) that are to be reported, the taxonomy-eligible and taxonomy-aligned net turnover, capital expenditure and operating expenses are calculated as a share of the total net turnover, capital expenditure and operating expenses that are to be taken into account in accordance with EU taxonomy requirements. The definition of each KPI is based on Annex I of the Delegated Act on Article 8 on the content and presentation of the information to be disclosed. When it comes to capital expenditure, the EU Taxonomy Regulation makes a distinction between different categories of capital expenditure. Due to Vonovia's business model, it largely invests (activity 7.2. and 7.7.) in assets or processes associated with economic activities that are taxonomy-aligned (category A). It also makes investments (activity 7.3.–7.6.) relating to the acquisition of products from taxonomy-eligible economic activities and individual measures, through which the target activities are carried out in a low-carbon manner or the emission of greenhouse gases is lowered (category C). Duplicate counting is avoided by means of direct allocation of the taxonomy-eligible or taxonomy-aligned turnover, capital expenditure and operating expenses to a taxonomy-eligible or taxonomy-aligned economic activity. As in the previous year, turnover from the condominium administration business, energy sales from energy trading activities, and multimedia are not taxonomy-eligible.*

No

#### (5.4.2.29) Details of substantial contribution criteria analysis

Capital expenditure on installation, maintenance and repair of instruments and devices for measuring, regulation and controlling energy performance of buildings is generally treated as a direct climate protection measure, meaning that no additional technical criteria need to be assessed.

#### (5.4.2.30) Do no significant harm requirements met

Select from:

No

#### (5.4.2.31) Details of do no significant harm analysis

For a detailed overview, please see our Annual Report 2024, p.80. Objective 2 Climate Change Adaptation: Vonovia uses an IT tool for continuous climate risk and vulnerability assessments across the Group-wide portfolio, employing scenarios RCP2.6, RCP4.5, and RCP8.5. Based on RCP4.5, no material risk for climate-related hazards was identified up to 2045, eliminating the need for an adaptation plan. Future adaptations will be defined and implemented at the portfolio level where material risks exist. Objective 3 Water and marine resources: No criteria need to be assessed, as these do not apply to taxonomy-alignment of residential building units. Objective 4 Waste: The requirements are met through the implementation of the German Circular Economy Act (KrWG)/national legislation, and are passed on to business partners by Vonovia through the Business Partner Code and the General Terms and Conditions of Contract for Construction Services, as well as being included in framework agreements with waste disposal companies. This ensures that the requirements are implemented for each project. The selected building and construction technology strengthens resource efficiency, adaptability and dismantling capacity, taking into account the requirements set out in the ISO 20887 standard. The photovoltaic systems installed by Vonovia also meet the requirements for preventing significant harm to EU environmental objective 4 on account of their design and service life. Objective 5 Pollution: Compliance with EU directives is mandated by law in DE, AT, SE. Vonovia only uses CE-marked construction products that conform to EU legislation. The Business Partner Code requires all subcontractors and suppliers to comply. The additional paragraph (Appendix C, substances relevant for CLP Regulation), has been reviewed by Vonovia. The relevant substances are adhesives or foams used in individual cases in construction or renovation work. The maximum mass concentration of hazardous substances of 0.1% that has been defined for mixtures of these products is not exceeded. Substances are no longer hazardous in their ultimate form, eg hardened foam, dried adhesive. Objective 6 Biodiversity: Vonovia's economic activities do not significantly harm the achievement of protection and restoration of biodiversity and ecosystems, as Vonovia only builds in designated areas. Relevant aspects are taken into account by the competent authorities in the approval procedures preceding such activities.

## (5.4.2.29) Details of substantial contribution criteria analysis

*Turnover generated from the acquisition and ownership of buildings (activity 7.7) is deemed taxonomy-aligned if the buildings constructed before December 31, 2020, have been assigned energy efficiency class A (or better) or, alternatively, are among the top 15 percent of regional or national housing stock in terms of primary energy demand in operation. Vonovia checks compliance by obtaining an energy performance certificate for each building. We base our assessment of the top 15 percent on relevant threshold values for primary energy demand for Germany, Austria and Sweden, which were determined in a recent benchmark study. For buildings constructed after December 31, 2020, the same criteria for substantial contribution to climate change mitigation apply as for new construction (activity 7.1).*

### (5.4.3) Provide any additional contextual and/or verification/assurance information relevant to your organization's taxonomy alignment.

#### (5.4.3.1) Details of minimum safeguards analysis

We are committed to our human rights due diligence obligations and align our conduct with internationally recognized frameworks such as the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and ILO Core Labour Standards. Vonovia adopts a Group-wide approach to meeting minimum safeguards: comprehensive procedures forming part of the compliance management system, including Group-wide guidelines and complaints mechanisms, have been put in place to prevent and uncover violations. A due diligence process to prevent business activities negatively impacting people and the environment forms the core element of compliance with minimum safeguards. Vonovia implements this process based on the OECD guidelines and has implemented all recommended due diligence steps: integrating human rights due diligence into strategy and processes and adopting a declaration of commitment, performing a regular risk analysis to identify and assess potentially negative impacts in consultation with stakeholders, implementing measures to end, prevent, mitigate and correct any failings in this regard, including monitoring such measures and reviewing their effectiveness, and communicating with the public regarding the approach taken and the measures implemented in order to fulfill human rights due diligence obligations. We provide more detailed information on how we met our responsibility to respect human rights in our non-financial statement, in our sustainability report as well as in our public human rights policy.

#### **(5.4.3.2) Additional contextual information relevant to your taxonomy accounting**

We report on our implementation of the EU Taxonomy including our degree of Taxonomy-alignment in our non-financial statement in our Annual Report. The non-financial and therefore our taxonomy reporting has been audited with limited assurance by an external auditor. The auditor's report has been published as part of the Annual Report. Vonovia has emitted Green Bonds and Social Bonds. We have published a Sustainable Finance Framework, which has been reviewed by ISS ESG. In its Second Party Opinion ISS ESG has evaluated the framework's alignment with the ICMA Green Bond Principles, ICMA Social Bond Principles, ICMA Sustainability Bond Guidelines as well as an assessment of the alignment of the Framework with the requirements of the EU Taxonomy. #### **(5.5) Does your organization invest in research and development (R&D) of low-carbon products or services related to your sector activities?**

##### **(5.5.1) Investment in low-carbon R&D**

Select from:

Yes

### (5.5.2) Comment

*Investment in research and development (R&D) of low-carbon products or services are made through investments in building integrated photovoltaic systems and innovative energy production.*

[Fixed row]

### (5.5.6) Provide details of your organization's investments in low-carbon R&D for real estate and construction activities over the last three years.

Row 1

#### (5.5.6.1) Technology area

Select from:

Building integrated photovoltaic systems

#### (5.5.6.2) Stage of development in the reporting year

Select from:

Full/commercial-scale demonstration

#### (5.5.6.3) Average % of total R&D investment over the last 3 years

74

#### (5.5.6.4) R&D investment figure in the reporting year (unit currency as selected in 1.2) (optional)

4464000

#### (5.5.6.5) Average % of total R&D investment planned over the next 5 years

### (5.5.6.6) Explain how your R&D investment in this technology area is aligned with your climate commitments and/or climate transition plan

Another aspect of implementing the climate pathway is increasing energy generation from renewable sources. To achieve this, Vonovia launched a long-term program to expand photovoltaic capacity in 2021. At the end of reporting year (2024), Vonovia owned 3,627 photovoltaic systems with an installed output of 134.8 MWp. This outstripped the target of 133.1 MWp. We will continue to forge ahead with the expansion of photovoltaics over the next few years: We aim to have installed around 400 MWp of capacity by 2028 and up to 700 MWp in the long term. We are aiming for additional capacity of 80 MWp in the 2025 fiscal year. In the long term, we intend to fit all suitable roof spaces in the German portfolio with PV panels by 2050.

#### Row 2

##### (5.5.6.1) Technology area

Select from:

- Direct current buildings system

##### (5.5.6.2) Stage of development in the reporting year

Select from:

- Applied research and development

##### (5.5.6.3) Average % of total R&D investment over the last 3 years

4

##### (5.5.6.4) R&D investment figure in the reporting year (unit currency as selected in 1.2) (optional)

365000

##### (5.5.6.5) Average % of total R&D investment planned over the next 5 years

30

## (5.5.6.6) Explain how your R&D investment in this technology area is aligned with your climate commitments and/or climate transition plan

The energy innovation team, which is part of the Innovation & Business Building department, actively works to help ensure that climate pathway targets are met by analyzing and testing innovative technologies. Our GHG emission reduction strategy which is based on three pillars: 1. increasing energy efficiency through energy-efficient refurbishment of the building envelope (facades, basement ceilings and attics, the replacement of windows and the installation of new heating boilers), 2. Increasing the share of renewable energies in the neighborhood (exchange of conventional heating systems with heat-pumps or district heating) and 3. Comprehensive transformation of the energy sector. As part of our growth strategy defined in 2024, we are driving and accelerating additional initiatives until 2029 to support our GHG reduction strategy: increased investments in serial refurbishment (an industrialized system that bundles and standardizes all steps in the refurbishment process). Examples that focus on the development of serial refurbishment are Energiesprong and Gropius. The emphasis is on new projects employing serial modular timber construction methods together with the company's joint venture partner Gropius.

### Row 3

#### (5.5.6.1) Technology area

Select from:

- Air-to-water heat pump

#### (5.5.6.2) Stage of development in the reporting year

- Large scale commercial deployment

#### (5.5.6.3) Average % of total R&D investment over the last 3 years

10

#### (5.5.6.4) R&D investment figure in the reporting year (unit currency as selected in 1.2) (optional)

1156000

#### (5.5.6.5) Average % of total R&D investment planned over the next 5 years

30

## (5.5.6.6) Explain how your R&D investment in this technology area is aligned with your climate commitments and/or climate transition plan

*Investments to upgrade energy efficiency and decarbonize our portfolio will be expanded over the next few years with the help of innovative concepts and smart technologies in line with Vonovia's climate pathway. Implementation of energy-efficiency modernizations has to be efficient, fast and cost-saving in the interests of cost-effectiveness. Vonovia is pursuing these concepts with "serial refurbishment," an industrialized system that bundles and standardizes all steps in the refurbishment process. Forging ahead with investments in heat pump technology is also part of the investment initiative. In this area, we are focusing on the new cube heating solution (e.g. in collaboration with "EnerCube"), a heat pump center that combines all the necessary components in an external module and is installed on-site outside the building.*

## (5.10) Does your organization use an internal price on environmental externalities?

	<b>Use of internal pricing of environmental externalities</b>	<b>Environmental externality priced</b>
	<i>Select from:</i> <input checked="" type="checkbox"/> Yes	<i>Select all that apply</i> <input checked="" type="checkbox"/> Carbon

[Fixed row]

### (5.10.1) Provide details of your organization's internal price on carbon.

**Row 1**

#### (5.10.1.1) Type of pricing scheme

*Select from:*

Implicit price

#### (5.10.1.2) Objectives for implementing internal price

Select all that apply

- Drive low-carbon investment
- Navigate regulations
- Stress test investments

#### **(5.10.1.3) Factors considered when determining the price**

Select all that apply

- Alignment with the price of a carbon tax
- Scenario analysis

#### **(5.10.1.4) Calculation methodology and assumptions made in determining the price**

At the beginning of 2021, the German government introduced a carbon price that also applies to the real estate sector: starting at €25 per metric ton of CO<sub>2</sub>, the cost of heating energy will be priced. The level of the carbon tax will rise steadily until 2025, before a market price is to determine the future level. For 2025, the price is set at €55 per metric ton of CO<sub>2</sub>. In 2024, the price per metric ton of CO<sub>2</sub> was at €45. The Climate Action Program 2030 also examined changes to tenancy law enabling the costs of a carbon tax to be passed on to tenants. As at the start of 2021, all of the related costs can be passed on. Until 2022, the law states that tenants will bear the cost, but the German Cabinet decided that the carbon tax will be split between owners and tenants from 2023 onwards. Depending on CO<sub>2</sub> intensity of a building, owners have to bear between 0% and 90% of the carbon tax. As 88% of our portfolio is located in Germany the carbon tax has a large direct impact on our business. Vonovia therefore calculates conservatively and takes the annual price per ton stipulated by law as its internal price and takes these into account in internal profitability and investment calculations. Effect in 2 ways: CO<sub>2</sub>-Tax and increasing effects is a criteria within DCF- calculation for investmentdecision and taken into account within the risk management.

#### **(5.10.1.5) Scopes covered**

Select all that apply

- Scope 1
- Scope 2

#### **(5.10.1.6) Pricing approach used – spatial variance**

Select from:

- Uniform

#### **(5.10.1.8) Pricing approach used – temporal variance**

Select from:

- Evolutionary

#### **(5.10.1.9) Indicate how you expect the price to change over time**

At the beginning of 2021, the German government introduced a carbon price that also applies to the real estate sector: starting at €25 per metric ton of CO<sub>2</sub>, the cost of heating energy will be priced. The price for the year 2024 was 45 euros per metric ton of CO<sub>2</sub>. The level of the carbon tax will further rise in 2025, before a market price is to determine the future level. For 2025, the price is set at €55 per metric ton of CO<sub>2</sub>.

#### **(5.10.1.10) Minimum actual price used (currency per metric ton CO<sub>2e</sub>)**

45

#### **(5.10.1.11) Maximum actual price used (currency per metric ton CO<sub>2e</sub>)**

55

#### **(5.10.1.12) Business decision-making processes the internal price is applied to**

Select all that apply

- Capital expenditure
- Operations
- Product and R&D
- Risk management

#### **(5.10.1.13) Internal price is mandatory within business decision-making processes**

Select from:

- Yes, for all decision-making processes

#### **(5.10.1.14) % total emissions in the reporting year in selected scopes this internal price covers**

93

#### **(5.10.1.15) Pricing approach is monitored and evaluated to achieve objectives**

Select from:

Yes

#### (5.10.1.16) Details of how the pricing approach is monitored and evaluated to achieve your objectives

*In order to operationalize the transformation plan, Vonovia uses the decarbonization tool (DCT), which maps its housing stock with all of the relevant ecological and economic characteristics. The DCT provides an overall plan showing how the housing stock needs to be modernized in detail in order to meet the Group's overall target and the time frame in which this must be done. Individual solution plans are identified for all buildings which are then set out in more specific detail in the plans for energy-efficient modernization and the energy concepts. Vonovia uses this tool in combination with the internal carbon price to evaluate its internal profitability and investment calculations.*

[Fixed row]

#### (5.11.1) Does your organization assess and classify suppliers according to their dependencies and/or impacts on the environment?

## Climate change

### (5.11.1.1) Assessment of supplier dependencies and/or impacts on the environment

Select from:

- Yes, we assess the dependencies and/or impacts of our suppliers

### (5.11.1.2) Criteria for assessing supplier dependencies and/or impacts on the environment

Select all that apply

- Dependence on ecosystem services/environmental assets

### (5.11.1.3) % Tier 1 suppliers assessed

Select from:

- 1-25%

### (5.11.1.4) Define a threshold for classifying suppliers as having substantive dependencies and/or impacts on the environment

According to the results of risk analysis due to environmental dependencies and impacts within Vonovia's Supply Chain we identified the following as proprietary: - Handling hazardous substances - Environmental pollution (soil, air, water) - Inappropriate waste management (POPs)

### (5.11.1.5) % Tier 1 suppliers meeting the threshold for substantive dependencies and/or impacts on the environment

Select from:

- 1-25%

### (5.11.1.6) Number of Tier 1 suppliers meeting the thresholds for substantive dependencies and/or impacts on the environment

770

[Fixed row]

## (5.11.2) Does your organization prioritize which suppliers to engage with on environmental issues?

### Climate change

#### (5.11.2.1) Supplier engagement prioritization on this environmental issue

Select from:

Yes, we prioritize which suppliers to engage with on this environmental issue

#### (5.11.2.2) Criteria informing which suppliers are prioritized for engagement on this environmental issue

Select all that apply

In line with the criteria used to classify suppliers as having substantive dependencies and/or impacts relating to climate change

#### (5.11.2.4) Please explain

We apply more than one criterion to prioritize for supplier engagement (BAFA Report): - Risk analysis (German Supply Chain Due Diligence Act) - Procurement spend (URL: <https://www.vonovia.com/en/about-us/company/for-business-partners>)

[Fixed row]

## (5.11.5) Do your suppliers have to meet environmental requirements as part of your organization's purchasing process?

	Suppliers have to meet specific environmental requirements related to this environmental issue as part of the purchasing process	Policy in place for addressing supplier non-compliance	Comment
Climate change	<p>Select from:</p> <p><input checked="" type="checkbox"/> Yes, environmental requirements related to this environmental issue are included in our supplier contracts</p>	<p>Select from:</p> <p><input checked="" type="checkbox"/> Yes, we have a policy in place for addressing non-compliance</p>	<p>Code of Conduct for Business Partners (URL: <a href="https://www.vonovia.com/en/about-us/company/for-business-partners">https://www.vonovia.com/en/about-us/company/for-business-partners</a>)</p>

Select from:

76-99%

### (5.11.6.9) Response to supplier non-compliance with this environmental requirement

Select from:

Exclude

### (5.11.6.12) Comment

*The prerequisite for our suppliers is a commitment to comply with Vonovia's Business Partner Code (BPC). By signing the code, suppliers undertake to protect the environment in the course of their business activities and to comply with the relevant laws, regulations and directives. This applies in particular to the applicable accident prevention regulations (UVV), workplace ordinance (ArbStättV) and the Waste and Recycling Management Act (AbfG/KrWG). In Sweden, we defined environmental criteria that will be binding for all new suppliers and their sub-suppliers from 2021 onwards. These criteria will be made binding for all other suppliers from 2025 onwards. The criteria include (1) internal environmental work, e.g. targets to reduce negative environmental impacts, (2) Material and products, e.g. life cycle assessment of products, (3) substances hazardous to the environment and health and substances of very high concerns (SVHC) in line with EU Taxonomy requirements (4) Waste, and (5) transport, e.g. emission requirements. In 2025, Vonovia released its Climate, Environmental and Energy Policy to foster its commitment towards environmental targets and highlights that Vonovia develops and maintains partnerships with companies, institutions and local authorities in order to promote the efficient and ecological use of resources and energy (Energy Policy 2025, p. 3). This also applies to subcontractors, who are equally subject to the BPCoC.*

Upstream value chain transparency and human rights

#### (5.11.7.3) Type and details of engagement

##### Financial incentives

Include long-term contracts linked to environmental commitments

Information collection

Other information collection activity, please specify :Monitor environmental impact via scoring system

Innovation and collaboration

Collaborate with suppliers on innovations to reduce environmental impacts in products and services

#### **(5.11.7.4) Upstream value chain coverage**

*Select all that apply*

Tier 1 suppliers

#### **(5.11.7.5) % of tier 1 suppliers by procurement spend covered by engagement**

*Select from:*

76-99%

#### **(5.11.7.6) % of tier 1 supplier-related scope 3 emissions covered by engagement**

*Select from:*

76-99%

#### **(5.11.7.9) Describe the engagement and explain the effect of your engagement on the selected environmental action**

*Rationale for the Coverage of Your Engagement:* Vonovia engages external suppliers and service providers through a structured process based on the Business Partner Code, procurement terms, and contractual agreements. Over the past 2.5 years, we prioritized high-impact suppliers based on procurement volume and climate-related risks, aligned with the German Supply Chain Due Diligence Act. Our goal is full coverage of tier 1 suppliers by the end of 2025. All suppliers must complete a two-stage onboarding via the Vonovia Partner Portal, including the submission of minimum wage declarations, exemption certificates, and relevant documents. Environmental practices are disclosed through self-assessment questionnaires. The Business Partner Code defines expectations for environmental responsibility, including low-emission materials and compliance with legal standards. In Sweden, binding environmental criteria have applied to new suppliers since 2021 and will extend to all by 2025. Compliance is monitored via a digital traffic light system. Non-compliance can lead to exclusion, payment blocks, or blacklisting. Suppliers are reassessed regularly through risk-based reviews and updated questionnaires. Our approach enhances transparency, closes documentation gaps, and enables targeted environmental performance monitoring across the supply chain.

## (5.11.7.10) Engagement is helping your tier 1 suppliers meet an environmental requirement related to this environmental issue

Select from:

Yes, please specify the environmental requirement :Compliance with labor, social and environmental/quality standards

## (5.11.7.11) Engagement is helping your tier 1 suppliers engage with their own suppliers on the selected action

Select from:

Yes

[Add row]

## (5.11.9) Provide details of any environmental engagement activity with other stakeholders in the value chain.

### Climate change

#### (5.11.9.1) Type of stakeholder

100%

#### (5.11.9.4) % stakeholder-associated scope 3 emissions

Select from:

26-50%

### **(5.11.9.5) Rationale for engaging these stakeholders and scope of engagement**

*Most climate-related impacts from our tenants are linked to energy consumption in residential buildings. Although tenants in Germany can freely choose their energy provider, Vonovia actively promotes energy-efficient behavior and low-emission energy options across its portfolio of approx. 540,000 units. New tenants receive energy-saving information during onboarding. Tenants also get regular information about energy costs and consumptions. In addition, all tenants are regularly reached through our customer magazine "zuhause" and the corporate website, which provide guidance on efficient heating, insulation, and sustainable everyday habits (see e.g.: <https://www.vonovia.de/en/mein-zuhause/saving-energy>). Vonovia Energie Service GmbH (VESG), a Vonovia subsidiary, offers access to renewable electricity, especially for heat pumps and tenant electricity models in new and modernized buildings. Even small behavioral changes can have significant impact due to the size of our portfolio. Effect and success measures: While our direct control is limited, we track success through emission intensity per rentable square meter. In 2024, GHG emission intensity decreased by approx. 1.6% (2023: 31.7 kg CO<sub>2</sub>e/m<sup>2</sup> → 2024: 31.2 kg CO<sub>2</sub>e/m<sup>2</sup>) (source: Annual Report 2024, SPI, ESRS 2) for our Scope 1 & 2. Additionally our communication and energy offerings help to also reduce Scope 3 (3.3 and 3.13) emissions from tenant energy use. This supports our long-term goal of achieving a climate-neutral building stock by 2045.*

### **(5.11.9.6) Effect of engagement and measures of success**

*Due to the size of our portfolio with around 540,000 flats in Germany, Austria and Sweden, the climate-relevant impact that we can achieve by motivating our tenants to adopt energy-efficient behaviour is significant. We therefore involve all of our customers in our engagement activities (target: 100 %). As described above, Vonovia's leverage to influence our tenants' electricity consumption is limited. However, in order to make our tenants aware of the importance of saving energy and conserving resources, we regularly inform them about energy-saving options in our customer magazine 'Zuhause', by distributing flyers and on our company website. Our GHG balance sheet allows us to at least roughly estimate the impact of our measures. In 2024, our tenants' household electricity emissions (Scope 3.13) have been reduced by around 10 % compared to 2022. Our own energy supply company (VESG) provides customers with electricity from renewable energies. we supply over 46,000 households with reasonably priced electricity and helping them to reduce GHG emissions. Focus is on establishing and expanding a full product portfolio covering all steps in the value chain – from generation of electricity using photovoltaic to the sale of electricity, use of heat pump and energy storage and management (AR2024, p. 96). As part of our climate strategy, we have set ourselves the goal of achieving a climate-neutral building stock by 2045. This also serves as a benchmark for our success.*

## **Climate change**

### **(5.11.9.1) Type of stakeholder**

Select from:

Investors and shareholders

### **(5.11.9.2) Type and details of engagement**

## Education/Information sharing

- Educate and work with stakeholders on understanding and measuring exposure to environmental risks
- Share information on environmental initiatives, progress and achievements

### (5.11.9.3) % of stakeholder type engaged

Select from:

- 76-99%

### (5.11.9.4) % stakeholder-associated scope 3 emissions

Select from:

- None

### (5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

*The stakeholder groups that are relevant to our IR work are private shareholders, institutional shareholders and analysts. Alongside conventional formats such as reporting and the Annual General Meeting, we also interact with our institutional shareholders at roadshows and conferences. What is more, we organize an annual corporate governance roadshow with our Supervisory Board Chair. Every two years, we organize an Analysts' and Investors' Day to present current topics and strategic perspectives as part of a face-to-face event. As far as our private shareholders are concerned, we are represented in various private investor forums, attending both virtual and in-person events throughout the year. In 2024, Vonovia participated in a total of 31 investors' conference days and also organized 37 roadshow days. In addition, Vonovia took part in various investor forums and numerous one-on-one meetings with investors and analysts to keep them informed of current developments and special issues. In 2024, we held many hundreds of talks with analysts and investors. Every investor has the possibility to reach to us to discuss additional topics together with Investor Relations or our specific experts. We use these engagements to also discuss the risks and opportunities of climate change and their perspective on us, the real estate and the general market.*

### (5.11.9.6) Effect of engagement and measures of success

*The Investor Relations Team is continuously in exchange with our different investors to align our performance, decisions and strategy with their expectations. On the topic of climate change and decarbonization they are getting the signal that we are among the frontrunners in the topic and that our approach and strategy align very well with their expectations. Additionally we receive impulses for improvements from our investors (e.g. adapting of the reporting to include TCFD, SASB mapping, alignment with CRREM paths and participation in certain ESG-ratings such as CDP).*

## Climate change

## (5.11.9.1) Type of stakeholder

Select from:

- Other value chain stakeholder, please specify :Employees

## (5.11.9.2) Type and details of engagement

Education/Information sharing

- Run an engagement campaign to educate stakeholders about the environmental impacts about your products, goods and/or services
- Share information about your products and relevant certification schemes
- Share information on environmental initiatives, progress and achievements

## (5.11.9.3) % of stakeholder type engaged

Select from:

- 100%

## (5.11.9.4) % stakeholder-associated scope 3 emissions

Select from:

- None

## (5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

*Our employees are a key element in the development and implementation of our measures on decarbonization with two of our key stakeholder groups (our tenants and our suppliers). As part of our mission statement and our strategy they form an important piece and we want to ensure that all our employees are taken along this path.*

## (5.11.9.6) Effect of engagement and measures of success

*We receive input from our employees through different engagement formats. The input from our employees is considered in our materiality assessment that consideres climate change as a material topic and subsequentially their input is also used to come up and develop measures and initiatives. Some of our successful measures to reduce our Scope 1, 2 or 3 greenhouse gas emissions are based on the engagement with our employees (e.g. fleet fuel-saving measures).*

[Fixed row]

## C7. Environmental performance - Climate Change

### (7.1) Is this your first year of reporting emissions data to CDP?

Select from:

No

#### (7.1.1) Has your organization undergone any structural changes in the reporting year, or are any previous structural changes being accounted for in this disclosure of emissions data?

	Has there been a structural change?
	<i>Select all that apply</i> <input checked="" type="checkbox"/> No

[Fixed row]

#### (7.1.2) Has your emissions accounting methodology, boundary, and/or reporting year definition changed in the reporting year?

##### (7.1.2.1) Change(s) in methodology, boundary, and/or reporting year definition?

*Select all that apply*

Yes, a change in boundary

##### (7.1.2.2) Details of methodology, boundary, and/or reporting year definition change(s)

The inclusion of Deutsche Wohnen in the GHG inventory was conducted in 2024. Deutsche Wohnen and Vonovia have been officially following a shared path since January 1, 2023 and as of 2024 the emissions have been included for Scope 1, 2 & 3. In 2024 and as part of the approved SBTi Vonovia reported for the first time emissions in Scope 3.11 Use of sold products. Scope 3.1 emissions from Purchased goods and services have been included for the first time in 2024 and subsequently also for years 2022 & 2023. The category covers the emissions from modernizations, optimizations, upgrade of buildings, photovoltaics and maintenance have been included as the main activities in category 3.1.

[Fixed row]

### **(7.1.3) Have your organization's base year emissions and past years' emissions been recalculated as a result of any changes or errors reported in 7.1.1 and/or 7.1.2?**

#### **(7.1.3.1) Base year recalculation**

Select from:

Yes

#### **(7.1.3.2) Scope(s) recalculated**

Select all that apply

- Scope 1
- Scope 2, location-based
- Scope 2, market-based
- Scope 3

#### **(7.1.3.3) Base year emissions recalculation policy, including significance threshold**

2024 marked the first year of Vonovia's external reporting according to the CSRD standard. Additionally in 2024 Vonovia's SBTi targets were validated and confirmed. This means that during 2024 Vonovia's GHG inventory underwent a major evaluation and scope extension to cover the same scope as the financial reporting. This resulted in the inclusion of Deutsche Wohnen in the inventory. Deutsche Wohnen and Vonovia have been officially following a shared path since January 1, 2023 and as of 2024 the emissions have been included for Scope 1, 2 & 3. Additionally the WTT emission of district heating have been moved from Scope 2 to Scope 3.3 to be in line with the emission reporting for all other purchased energy. Lastly in 2024 and as part of the approved SBTi Vonovia reported for the first time emissions in Scope 3.11 Use of sold products. Subsequently all changes in the base year (2021) have also been led to recalculation of the emissions for 2022 & 2023.

#### **(7.1.3.4) Past years' recalculation**

Select from:

Yes

[Fixed row]

## **(7.2) Select the name of the standard, protocol, or methodology you have used to collect activity data and calculate emissions.**

Select all that apply

- EPRA (European Public Real Estate Association) Sustainability Best Practice recommendations Guidelines, 2017
- The Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (Revised Edition)
- The Greenhouse Gas Protocol: Scope 2 Guidance
- The Greenhouse Gas Protocol: Corporate Value Chain (Scope 3) Standard

## **(7.3) Describe your organization's approach to reporting Scope 2 emissions.**

### **(7.3.1) Scope 2, location-based**

Select from:

- We are reporting a Scope 2, location-based figure

### **(7.3.2) Scope 2, market-based**

Select from:

- We are reporting a Scope 2, market-based figure

### **(7.3.3) Comment**

*Market-based Scope Calculation using utility-specific emission factors (market-based), if available, in qualified form. Otherwise, use of location-specific emission factors (location-based).*

[Fixed row]

**(7.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1, Scope 2 or Scope 3 emissions that are within your selected reporting boundary which are not included in your disclosure?**

Select from:

No

**(7.5) Provide your base year and base year emissions.**

**Scope 1**

**(7.5.1) Base year end**

12/31/2021

**(7.5.2) Base year emissions (metric tons CO2e)**

604450

**(7.5.3) Methodological details**

*To calculate the emissions from the combustion of fossil fuels and location-based emissions in Scopes 1, 2 and 3.3, the CO<sub>2</sub>e factors from version 5.1 of the GEMIS (Global Emission Model for Integrated Systems) database were used. GEMIS is an internationally recognized model for determining energy and material flows with an integrated database. The model calculates life cycles for all processes and scenarios, i.e., it takes into consideration all material steps from primary energy and raw material extraction to effective energy and material provision, and also includes the auxiliary energy and cost of materials to produce energy plants and transport systems.*

**Scope 2 (location-based)**

**(7.5.1) Base year end**

12/31/2021

**(7.5.2) Base year emissions (metric tons CO2e)**

391373

### (7.5.3) Methodological details

To calculate the emissions from the combustion of fossil fuels and location-based emissions in Scopes 1, 2 and 3.3, the CO<sub>2</sub>e factors from version 5.1 of the GEMIS (Global Emission Model for Integrated Systems) database were used. GEMIS is an internationally recognized model for determining energy and material flows with an integrated database. The model calculates life cycles for all processes and scenarios, i.e., it takes into consideration all material steps from primary energy and raw material extraction to effective energy and material provision, and also includes the auxiliary energy and cost of materials to produce energy plants and transport systems.

### Scope 2 (market-based)

#### (7.5.1) Base year end

12/30/2021

#### (7.5.2) Base year emissions (metric tons CO2e)

369461

### (7.5.3) Methodological details

In order to calculate market-based emissions, the specific emission factors of the energy suppliers were used where this data was available. With regard to the purchase of district heating from combined heat and power (CHP) plants, we use emission factors based on the Carnot allocation method, as this allows for more realistic allocation of emissions to heat or electricity in physical terms. If no specific emission factors were available, the corresponding location-based factor was used. If other emission factors are applied in individual cases, this is indicated accordingly.

### Scope 3 category 1: Purchased goods and services

## (7.6) What were your organization's gross global Scope 1 emissions in metric tons CO2e?

#### Reporting year

##### (7.6.1) Gross global Scope 1 emissions (metric tons CO2e)

539867

### (7.6.3) Methodological details

*Including Deutsche Wohnen - This greenhouse gas balance (GHG balance) was prepared on the basis of the standards of the Greenhouse Gas Protocol Corporate Standard and Corporate Value Chain (Scope 3) Standard, the internationally recognized standards for calculating greenhouse gas emissions. The recommendations set out in the guidance issued by the Federal Association of German Housing and Real Estate Enterprise Registered Associations (GdW), "Arbeitshilfe 85 (CO2 Monitoring)", and the recommendations published by the Wohnen 2050 housing initiative (IW2050), have also been taken into account. The scope of consolidation relevant to Vonovia's greenhouse gas balance matches that of the other environmental indicators in our ESG Factbook. GHG emissions were calculated in carbon dioxide equivalents (CO2e), the standardized unit to measure the relative contributions to the greenhouse effect of the greenhouse gases CO<sub>2</sub>, CH<sub>4</sub>, N<sub>2</sub>O, SF<sub>6</sub>, HFCs*

and PFCs regulated by the Kyoto Protocol. The calculation of GHG emissions in the portfolio is conducted according to the financial control approach. Emissions produced as a result of portfolio operations over which Vonovia has full control are disclosed under Scope 1 and Scope 2 emissions. For the part of the portfolio, in which the company holds a minority interest, the carbon emission figures are reported under Scope 3.

## Past year 1

### (7.6.1) Gross global Scope 1 emissions (metric tons CO2e)

508141

### Purchased goods and services

#### (7.8.1) Evaluation status

*Select from:*

Relevant, calculated

#### (7.8.2) Emissions in reporting year (metric tons CO<sub>2</sub>e)

170748

#### (7.8.3) Emissions calculation methodology

*Select all that apply*

Average data method  
 Average product method

#### (7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

### (7.8.5) Please explain

*GHG emissions from the production and installation of building materials and materials for maintenance, energy-efficient modernization, "Optimize Apartments" measures and heating system replacement. GHG emissions are calculated using emission factors created by external experts on the basis of typical measures taken by various companies in the housing industry. The emissions were calculated by multiplying the corresponding units of the measures implemented (modernized m<sup>2</sup> of living area) by the relevant emission factors.*

## Capital goods

### (7.8.1) Evaluation status

Select from:

Relevant, calculated

### (7.8.2) Emissions in reporting year (metric tons CO<sub>2</sub>e)

132075

### (7.8.3) Emissions calculation methodology

Select all that apply

Average product method

Asset-specific method

### (7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

0

### (7.8.5) Please explain

*GHG emissions from the production of building materials use for the new buildings completed in the fiscal year in question. The GHG emissions are calculated using emission factors based on the building construction type as prepared by external experts as part of a comprehensive life cycle assessment for a model building. Total emissions were calculated by multiplying the gross floor space completed by the emission factors for the corresponding construction type.*

## Fuel-and-energy-related activities (not included in Scope 1 or 2)

### (7.8.1) Evaluation status

Select from:

- Relevant, calculated

### (7.8.2) Emissions in reporting year (metric tons CO2e)

205634

### (7.8.3) Emissions calculation methodology

Select all that apply

- Supplier-specific method
- Hybrid method
- Fuel-based method

### (7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

31.2

### (7.8.5) Please explain

Based on actual fuel and energy consumption data both for the wholly owned housing stock and for apartments owned by Vonovia that belong to a residential property owners' association (WEG) (their Scope 1 and 2 emissions are reported as Scope 3.13 emissions)

## Upstream transportation and distribution

### (7.8.1) Evaluation status

Select from:

- Not relevant, explanation provided

### (7.8.5) Please explain

All upstream transportation and distribution emissions within the manufacturing process of the materials used for new construction are accounted for in category 3.2. Emissions from transportation to a construction site are neglectable in the building sector compared to overall emissions. Most of the materials with the most weight are produced nearby and transported only small distances because of cost reasons. For purchased goods and services transportation and distribution emissions are partly included in category 3.1 we have identified the emission levels to not be material.

## Waste generated in operations

### (7.8.1) Evaluation status

Select from:

Not relevant, explanation provided

### (7.8.5) Please explain

In the SBTi evaluation process a full screening of all Scope 3 categories was conducted. For Scope 3.5 Waste generated in operations the estimated GHG emission for 2021 were approximately 420 t CO2e, which equaled 0.04% of total Scope 3 emissions. Thus, this category was defined as not relevant.

## Business travel

### (7.8.1) Evaluation status

Select from:

Not relevant, explanation provided

### (7.8.5) Please explain

In previous years emissions from business travel were calculated and reported. For 2023 the emissions were calculated at 867t CO2e, which is below 0.1% of the total Scope 3 emissions reported for 2024. Thus, this category was defined as not significant for future reporting.

## Employee commuting

### (7.8.1) Evaluation status

Select from:

Not relevant, explanation provided

## (7.8.5) Please explain

*In the SBTi evaluation process a full screening of all Scope 3 categories was conducted. For Scope 3.7 Employee commuting the estimated GHG emission for 2021 was approximately 12,530 t CO2e, which equaled 1.3% of total Scope 3 emissions. Thus, this category was defined as not relevant.*

### Upstream leased assets

#### (7.8.1) Evaluation status

Select from:

- Not relevant, explanation provided

## (7.8.5) Please explain

*In the SBTi evaluation process a full screening of all Scope 3 categories was conducted. Vonovia has no significant activity relating to this category. During our assurance process for our 2023 data as well as in the SBTi evaluation process the scope 3 emission categories were also evaluated and the relevance was confirmed.*

### Downstream transportation and distribution

#### (7.8.1) Evaluation status

Select from:

- Not relevant, explanation provided

## (7.8.5) Please explain

*As a provider of housing, downstream transport is not relevant to our business model and does not occur. During our assurance process for our 2023 data as well as in the SBTi evaluation process the Scope 3 emission categories were also evaluated and the relevance was confirmed.*

### Processing of sold products

#### (7.8.1) Evaluation status

Select from:

Not relevant, explanation provided

## (7.8.5) Please explain

*Vonovia is a service provider and does not sell any semi-manufactured products. During our assurance process for our 2023 data as well as in the SBTi evaluation process the scope 3 emission categories were also evaluated and the relevance was confirmed.*

## Use of sold products

### (7.8.1) Evaluation status

Select from:

Relevant, calculated

### (7.8.2) Emissions in reporting year (metric tons CO2e)

48557

### (7.8.3) Emissions calculation methodology

Select all that apply

Average data method

### (7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

0

## (7.8.5) Please explain

*GHG emissions from the operation of newly constructed residential units sold in the relevant fiscal year (provision of heat and warm water) over the lifespan of 50 years (in line with the recommendation of the Association of German Housing and Real Estate Companies (GdW)). Declining GHG intensity of district heating and electricity is assumed over the course of the property's useful life. This matches the assumed trend for the company's own portfolio*

## End of life treatment of sold products

## (7.8.1) Evaluation status

Select from:

- Not relevant, explanation provided

## (7.8.5) Please explain

Vonovia does not offer any products that need to be disposed of. Buildings and apartments which are sold have an almost unlimited lifetime. If they in parts will be disposed of in the future, there are no reliable metrics to calculate potential GHG emissions. During our assurance process for our 2023 data as well as in the SBTi evaluation process the Scope 3 emission categories were also evaluated and the relevance was confirmed.

## Downstream leased assets

### (7.8.1) Evaluation status

Select from:

- Relevant, calculated

### (7.8.2) Emissions in reporting year (metric tons CO2e)

497568

### (7.8.3) Emissions calculation methodology

Select all that apply

- Average data method
- Asset-specific method

### (7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

0

## (7.8.5) Please explain

*GHG emissions generated from household electricity used by tenants in their homes for electrical appliances (excluding general electricity or electricity required for heat and warm water). The corresponding electricity consumption is estimated based on a method developed at sector level, since real data is not available to the landlord. User electricity for commercial units was extrapolated based on average values for types of use. The national emission factor for electricity is used to calculate emissions (location-based), as are GHG emissions resulting from the supply of heating and warm water to rental units that are owned by Vonovia and belong to a residential property owners' association (WEG).*

## **Franchises**

### **(7.8.1) Evaluation status**

*Select from:*

Not relevant, explanation provided

### **(7.8.5) Please explain**

*Vonovia does not operate any franchises. During our assurance process for our 2023 data as well as in the SBTi evaluation process the Scope 3 emission categories were also evaluated and the relevance was confirmed.*

## **Investments**

### **(7.8.1) Evaluation status**

*Select from:*

Not relevant, explanation provided

### **(7.8.5) Please explain**

*Vonovia only has neglectable shares in relevant companies. In the SBTi evaluation process a full screening of all Scope 3 categories was conducted. For Scope 3.15 investments, the estimated GHG emission for 2021 was approximately 18,843 t CO<sub>2</sub>e, which equaled 2% of total Scope 3 emissions. Thus, this category was defined as not relevant. During our assurance process for our 2023 data as well as in the SBTi evaluation process the Scope 3 emission categories were also evaluated and the relevance was confirmed.*

## **Other (upstream)**

### **(7.8.1) Evaluation status**

Select from:

Not evaluated

### (7.8.5) Please explain

*There are no other upstream emissions.*

### Other (downstream)

#### (7.8.1) Evaluation status

Select from:

Not evaluated

### (7.8.5) Please explain

*There are no other downstream emissions.*

## (7.10) How do your gross global emissions (Scope 1 and 2 combined) for the reporting year compare to those of the previous reporting year?

Select from:

Increased

### (7.10.1) Identify the reasons for any change in your gross global emissions (Scope 1 and 2 combined), and for each of them specify how your emissions compare to the previous year.

#### Change in renewable energy consumption

##### (7.10.1.1) Change in emissions (metric tons CO2e)

8500

##### (7.10.1.2) Direction of change in emissions

Select from:

Decreased

##### (7.10.1.3) Emissions value (percentage)

1.02

#### (7.10.1.4) Please explain calculation

*Additional purchase of green electricity through certificates, including for electricity consumption for heat supply in the Germany portfolio.*

#### Other emissions reduction activities

##### (7.10.1.1) Change in emissions (metric tons CO2e)

6169

##### (7.10.1.2) Direction of change in emissions

Select from:

Decreased

##### (7.10.1.3) Emissions value (percentage)

0.74

#### (7.10.1.4) Please explain calculation

*Gross Scope 1 & 2 emissions decreased by 0.74% due to emission reduction initiatives such as the heating program as well as modernization programs. Through these activities we reduced our emissions by 6,169 tons CO2e, and our total Scope 1 & 2 emissions in the previous year was 834,979 tons CO2e, this results in – 0.74%, based on the following calculation: (6,169/834,979)\*1000.*

#### Divestment

##### (7.10.1.1) Change in emissions (metric tons CO2e)

14400

##### (7.10.1.2) Direction of change in emissions

Select from:

Decreased

#### (7.10.1.3) Emissions value (percentage)

1.72

#### (7.10.1.4) Please explain calculation

*Gross Scope 1 & 2 emissions decreased by 1.72% due to the reduction of energy consumption of sold buildings based on energy certificates. Through these activities, our emissions decreased by 14,400 tons CO2e, and our total Scope 1 & 2 emissions in the previous year was 834,979 tons CO2e, this results in -1.72%, based on the following calculation: (14,400/834,979)\*1000*

### Acquisitions

#### (7.10.1.1) Change in emissions (metric tons CO2e)

0

#### (7.10.1.2) Direction of change in emissions

*Select from:*

No change

#### (7.10.1.3) Emissions value (percentage)

0

#### (7.10.1.4) Please explain calculation

*no change*

### Mergers

#### (7.10.1.1) Change in emissions (metric tons CO2e)

0

## (7.10.1.2) Direction of change in emissions

Select from:

No change

## (7.10.1.3) Emissions value (percentage)

0

## (7.10.1.4) Please explain calculation

*no change*

### Change in output

## (7.10.1.1) Change in emissions (metric tons CO2e)

1000

## (7.10.1.2) Direction of change in emissions

Select from:

Increased

## (7.10.1.3) Emissions value (percentage)

0.12

## (7.10.1.4) Please explain calculation

*Gross Scope 1 & 2 emissions increased by 0.12% due to the construction of new buildings. Through these construction activities, our emissions increased by 1000 tons CO2e, and our total Scope 1 & 2 emissions results in +0.12%, based on the following calculation: (1000/834,979)\*1000.*

### Change in methodology

### (7.10.1.1) Change in emissions (metric tons CO2e)

2600

### (7.10.1.2) Direction of change in emissions

Select from:

Decreased

### (7.10.1.3) Emissions value (percentage)

0.31

### (7.10.1.4) Please explain calculation

*Due to DIN 18599, which must be complied with since 2024, the calculation method has been changed so that buildings with an energy performance certificate that lists gas as the primary energy source and was issued after 31 December 2023 are multiplied by the emission factor for condensing boilers. This corresponds to the emission factor for calorific value divided by 1.11.*

## Change in boundary

### (7.10.1.1) Change in emissions (metric tons CO2e)

4500

### (7.10.1.2) Direction of change in emissions

Select from:

Increased

### (7.10.1.3) Emissions value (percentage)

0.54

### (7.10.1.4) Please explain calculation

*Care facilities managed by third parties were included in the carbon footprint calculation.*

## **Change in physical operating conditions**

No change

### **(7.10.1.3) Emissions value (percentage)**

0

#### (7.10.1.4) Please explain calculation

*no change*

#### Other

#### (7.10.1.1) Change in emissions (metric tons CO2e)

28000

#### (7.10.1.2) Direction of change in emissions

Select from:

Increased

#### (7.10.1.3) Emissions value (percentage)

3.29

#### (7.10.1.4) Please explain calculation

*Two reasons: - Improvement in Data quality of Energy Consumption - Our energy certificates, which were processed as district heating energy sources, were checked to see whether they were actually a local gas heating network. In this context, our CO2 intensity has deteriorated slightly, as the average district heating emission factors are better than the emission factor for gas. - Emissions were allocated to Scope 3.13 (WEG) for 2023 due to an incorrect attribute in the WEG data. The emissions were still reported in the ESG Factbook as in the previous year, but should be lower by this amount in Scope 3.13 and higher by this amount in Scope 1/2.*

*[Fixed row]*

### (7.10.2) Are your emissions performance calculations in 7.10 and 7.10.1 based on a location-based Scope 2 emissions figure or a market-based Scope 2 emissions figure?

Select from:

Market-based

### (7.12) Are carbon dioxide emissions from biogenic carbon relevant to your organization?

Select from:

No

**(7.15) Does your organization break down its Scope 1 emissions by greenhouse gas type?**

Select from:

No

**(7.16) Break down your total gross global Scope 1 and 2 emissions by country/area.**

	Scope 1 emissions (metric tons CO <sub>2</sub> e)	Scope 2, location-based (metric tons CO <sub>2</sub> e)	Scope 2, market-based (metric tons CO <sub>2</sub> e)
Austria	18054	17043	16803
Germany	521389	290989	253921
Sweden	425	27486	26241

*[Fixed row]*

**(7.30.14) Provide details on the electricity, heat, steam, and/or cooling amounts that were accounted for at a zero or near-zero emission factor in the market-based Scope 2 figure reported in 7.7.**

**Row 1**

**(7.30.14.1) Country/area**

*Select from:*

Germany

**(7.30.14.2) Sourcing method**

*Select from:*

Heat/steam/cooling supply agreement

**(7.30.14.3) Energy carrier**

*Select from:*

Heat

**(7.30.14.4) Low-carbon technology type**

*Select from:*

Other biomass

**(7.30.14.5) Low-carbon energy consumed via selected sourcing method in the reporting year (MWh)**

6319

**(7.30.14.6) Tracking instrument used**

*Select from:*

No instrument used

## (7.30.14.7) Country/area of origin (generation) of the low-carbon energy or energy attribute

Select from:

- Germany

## (7.30.14.8) Are you able to report the commissioning or re-powering year of the energy generation facility?

Select from:

- No

## (7.30.14.10) Comment

*420 buildings are served with climate-neutral methane gas extracted by coal mining that is collected and used for heating. CO2 is much less harming for the environment than methane. The German government has defined these emissions as zero emissions.*

## Row 3

### (7.30.14.1) Country/area

Select from:

- Austria

### (7.30.14.2) Sourcing method

Select from:

- Retail supply contract with an electricity supplier (retail green electricity)

### (7.30.14.3) Energy carrier

Select from:

- Electricity

### (7.30.14.4) Low-carbon technology type

Select from:

Hydropower (capacity unknown)

#### (7.30.14.5) Low-carbon energy consumed via selected sourcing method in the reporting year (MWh)

407

#### (7.30.14.6) Tracking instrument used

Select from:

Contract

#### (7.30.14.7) Country/area of origin (generation) of the low-carbon energy or energy attribute

Select from:

Austria

#### (7.30.14.8) Are you able to report the commissioning or re-powering year of the energy generation facility?

Select from:

No

#### (7.30.14.10) Comment

For the Austria region, since 2021, all volumes for business processes are 100% green electricity through UZ46 certified green electricity from Ökostrom GmbH.

### Row 6

#### (7.30.14.1) Country/area

Select from:

Germany

#### (7.30.14.2) Sourcing method

Select from:

Financial (virtual) power purchase agreement (VPPA)

#### (7.30.14.3) Energy carrier

Select from:

Electricity

#### (7.30.14.4) Low-carbon technology type

Select from:

Wind

#### (7.30.14.5) Low-carbon energy consumed via selected sourcing method in the reporting year (MWh)

4183

#### (7.30.14.6) Tracking instrument used

Select from:

GO

#### (7.30.14.7) Country/area of origin (generation) of the low-carbon energy or energy attribute

Select from:

Germany

#### (7.30.14.8) Are you able to report the commissioning or re-powering year of the energy generation facility?

Select from:

Yes

#### (7.30.14.9) Commissioning year of the energy generation facility (e.g. date of first commercial operation or repowering)

2018

## (7.30.14.10) Comment

*The PPA in 2024 with RWE covered the production of electricity from two German windfarms. In Ovelgönne and Fischbeck.*

### Row 7

#### (7.30.14.1) Country/area

*Select from:*

#### (7.45.7) Direction of change

Select from:

Decreased

#### (7.45.8) Reasons for change

Select all that apply

Other emissions reduction activities  
 Change in revenue

#### (7.45.9) Please explain

Absolute emissions for Scope 1 & 2 have remained similar compared to last year, while the revenue increased significantly leading to a substantial decrease in the emission intensity. Additionally more modernisations have been done at the end of 2023 and partially 2024, which led to a decrease in the heating consumption of the portfolio.

**(7.53.1.77) Total emissions in reporting year covered by target in all selected scopes (metric tons CO2e)**

836832.000

**(7.53.1.78) Land-related emissions covered by target**

*Select from:*

No, it does not cover any land-related emissions (e.g. non-FLAG SBT)

#### (7.53.1.79) % of target achieved relative to base year

33.51

#### (7.53.1.80) Target status in reporting year

Select from:

Underway

#### (7.53.1.82) Explain target coverage and identify any exclusions

*The target applies to scope 1&2 GHG emissions from the Group's building portfolios in Germany, Austria and Sweden. Emissions in the base year include emissions from the buildings from Deutsche Wohnen SE, which became part of the Group in 2021. For a better comparability, we recalculated the emissions from the Deutsche Wohnen portfolio with the same methods used at Vonovia. GHG emissions from operations are not part of the target because of their minor importance (only 2.9% of all Scope 1+2 emissions).*

#### (7.53.1.83) Target objective

*Target objective is -42% for the included scope 1+2 emissions until 2030. These targets are in line with the Absolute Contraction Approach (ACA) of the Science-based Target initiative (SBTi). Our target has been approved by SBTi in April 2024 (<https://sciencebasedtargets.org/companies-taking-action>).*

#### (7.53.1.84) Plan for achieving target, and progress made to the end of the reporting year

*The transition plan for our housing stock, our climate pathway, consist of three decarbonization levers. 1. Increasing efficiency and thus reducing energy demand for heat and warm water supply by way of energy-efficient refurbishment of the building envelope 2. Increasing the share of renewable energies in the neighborhood by installing heat pumps and expanding power generation using photovoltaic systems on our buildings and 3. Comprehensive transformation of the energy sector and supply of sufficient quantities of GHG-free district heating and electricity by the energy sector. In addition to the modernization measures implemented in the reporting year despite the lower investment volume (building envelope + replacement of heating systems), this reduction can also be traced back to numerous energy certificate updates.*

#### (7.53.1.85) Target derived using a sectoral decarbonization approach

Select from:

No

Select from:

21-30 years

### (7.55.2.9) Comment

*The focus of our modernization measures for building shells has been laid on facade insulation, window replacements as well as roof and basement ceiling insulation. We comply completely with the legal requirements of the German Energy Saving Ordinance (EnEV). The German Reconstruction Loan Corporation (KfW) is subsidizing a major portion of the modernization measures. The KfW standard, which is required to obtain a subsidy, actually exceeds the EnEV efficiency requirements. We value having access to a broad mix of financing instruments so that we can choose the right product at the right time, e.g., bonds, promissory notes, secured real estate loans, commercial papers, working capital facilities and subsidy loans from KfW and EIB. Since 2021, we have placed several green or social bonds following our Sustainable Finance Framework.*

[Add row]

## (7.55.3) What methods do you use to drive investment in emissions reduction activities?

Row 1

### (7.55.3.1) Method

Select from:

Compliance with regulatory requirements/standards

### (7.55.3.2) Comment

*The focus of our modernization measures for building shells has been laid on facade insulation, window replacements as well as roof and basement ceiling insulation. We comply completely with the legal requirements of the German Energy Saving Ordinance (EnEV). The German Reconstruction Loan Corporation (KfW) is subsidizing a major portion of the modernization measures. The KfW standard, which is required to obtain a subsidy, actually exceeds the EnEV efficiency requirements. We value having access to a broad mix of financing instruments so that we can choose the right product at the right time, e.g., bonds, promissory notes, secured real estate loans, commercial papers, working capital facilities and subsidy loans from KfW and EIB. In November 2022, the EIB granted Vonovia an unsecured loan of € 600 million to support the company's multi-year energy-efficient building modernization program. The German Reconstruction Loan Corporation (KfW) is subsidizing a major portion of the modernization measures. Sustainable bonds play a particularly important role in our financing strategy. Since 2021 we have placed several green or social bonds following our Sustainable Finance Framework.*

Row 2

### (7.55.3.1) Method

Select from:

Other :Lowering of engagement barriers to renewable energy

### (7.55.3.2) Comment

*Vonovia is offering its customers the opportunity to purchase electricity from renewable energy sources via its own energy distribution company (VESG). By providing green energy that has been generated or certified in the neighborhood, we are supplying more than 40,000 households with around 50 GWh of low-cost electricity and helping them to reduce greenhouse gas emissions. Our objective is to maximize the share of energy we produce ourselves for the benefit of our customers and the environment, and also to use it for our housing-related services, e.g., e-mobility. The purchase of certified green electricity to supply communal areas makes a further contribution to our climate strategy.*

[Add row]

## (7.72) Does your organization assess the life cycle emissions of new construction or major renovation projects?

### (7.72.1) Assessment of life cycle emissions

Select from:

Yes, quantitative assessment

### (7.72.2) Comment

*For our projects, we perform a simplified LCA according to the BUWOG reference house procedure. Here, the embodied carbon emissions and the primary energy demand for new construction and operation are calculated in a simplified way. The basis is DIN 15978 as well as the energy certificate.*

[Fixed row]

## (7.72.1) Provide details of how your organization assesses the life cycle emissions of new construction or major renovation projects.

### (7.72.1.1) Projects assessed

Select from:

- New construction and major renovation projects meeting certain criteria (please specify)

### (7.72.1.2) Earliest project phase that most commonly includes an assessment

Select from:

- Design phase

### (7.72.1.3) Life cycle stage(s) most commonly covered

Select from:

- Whole life

### (7.72.1.4) Methodologies/standards/tools applied

Select all that apply

- EN 15978
- Other, please specify :EN 15978 and heat requirement calculation (Wärmebedarfsberechnung) according to ENEV (Energieeinsparverordnung)

### (7.72.1.5) Comment

*An LCA is calculated for all new buildings without restrictions. In the case of energy-efficient refurbishment of existing quarters, the LCA is only calculated, if new buildings are added in the same project.*

[Fixed row]

## (7.72.2) Can you provide embodied carbon emissions data for any of your organization's new construction or major renovation projects completed in the last three years?

### (7.72.2.1) Ability to disclose embodied carbon emissions

Select from:

Yes

### **(7.72.2.2) Comment**

*BUWOG has developed a simplified procedure for determining embodied carbon according to the reference house method. The calculation tool will be used to determine the amount of embodied CO<sub>2</sub> for all new construction projects in the future. For the years 2021, 2022, 2023 and 2024 the sums of embodied CO<sub>2</sub> were calculated and published. Additionally as of 2024 embodied carbon emissions are also modelled for renovations (building and home modernisation) and maintenance, based on generic emission values. The estimated emissions have been included in the GHG inventory in Scope 3.1.*

*[Fixed row]*

### **(7.72.3) Provide details of the embodied carbon emissions of new construction or major renovation projects completed in the last three years.**

- Other, please specify :EN 15978 and heat requirement calculation (Wärmebedarfsberechnung) according to ENEV (Energieeinsparverordnung)

### (7.72.3.11) Comment

*The LCA is calculated per m<sup>2</sup> GFA according to DIN 277 and as a total sum per project. The coverage refers to all new buildings in the corresponding year.*  
[Add row]

## (7.74) Do you classify any of your existing goods and/or services as low-carbon products?

Select from:

- Yes

### (7.74.1) Provide details of your products and/or services that you classify as low-carbon products.

Row 1

#### (7.74.1.1) Level of aggregation

Select from:

- Group of products or services

#### (7.74.1.2) Taxonomy used to classify product(s) or service(s) as low-carbon

Select from:

- The EU Taxonomy for environmentally sustainable economic activities

#### (7.74.1.3) Type of product(s) or service(s)

Buildings construction and renovation

- Building orientation: Thermal performance

#### (7.74.1.4) Description of product(s) or service(s)

*Turnover generated from the acquisition and ownership of buildings (activity 7.7) is deemed taxonomy-aligned if the buildings constructed before December 31, 2020 have been assigned energy efficiency class A (or better) or, alternatively, are among the top 15% of regional or national housing stock in terms of primary energy demand in operation. Vonovia checks compliance by obtaining an energy performance certificate for each building. We base our assessment of the top 15% on relevant threshold values for primary energy demand for Germany, Austria and Sweden, which were determined in a benchmark study. The study was updated for Germany in the 2023 fiscal year and the new threshold (lower and, as a result, more restrictive than in the previous year) was applied for the first time for the 2024 reporting year.*

#### (7.74.1.5) Have you estimated the avoided emissions of this low-carbon product(s) or service(s)

Select from:

Yes

#### (7.74.1.6) Methodology used to calculate avoided emissions

Select from:

Other, please specify :"We calculate the emissions by using emission factors from GEMIS, DEFRA, Environmental departments Germany and Austria as well as Covenant of Mayors for Climate and Energy and Swedenergy"

#### (7.74.1.7) Life cycle stage(s) covered for the low-carbon product(s) or services(s)

Select from:

Use stage

#### (7.74.1.8) Functional unit used

kg CO2e per m<sup>2</sup>

#### (7.74.1.9) Reference product/service or baseline scenario used

Comparison with the average German building stock based on a recent study with a reference average CO2 of 32.9 kg CO2e/m<sup>2</sup>

#### (7.74.1.10) Life cycle stage(s) covered for the reference product/service or baseline scenario

Select from:

Use stage

#### (7.74.1.11) Estimated avoided emissions (metric tons CO2e per functional unit) compared to reference product/service or baseline scenario

14.4

#### (7.74.1.12) Explain your calculation of avoided emissions, including any assumptions

The calculation is based on the comparison of the average greenhouse gas emission values for the EU Taxonomy eligible portfolio of 18.5 kg CO2e/m2 with the average German building stock based on a recent study by Drees & Sommer with a reference average CO2 of 32.9 kg CO2e/m2.

### (7.74.1.13) Revenue generated from low-carbon product(s) or service(s) as % of total revenue in the reporting year

12.1

#### Row 2

### (7.74.1.1) Level of aggregation

Select from:

- Group of products or services

### (7.74.1.2) Taxonomy used to classify product(s) or service(s) as low-carbon

Select from:

- The EU Taxonomy for environmentally sustainable economic activities

### (7.74.1.3) Type of product(s) or service(s)

Power

- Solar PV

### (7.74.1.4) Description of product(s) or service(s)

Further growth in the Value-add segment at all stages in our value chain will secure additional earnings potential. The existing energy business and the use of photovoltaics are being expanded on a large scale. The focus is on establishing and expanding a full product portfolio covering all steps in the value chain – from the generation of electricity using photovoltaic modules to the sale of this electricity as tenant electricity, the use of heat pumps, and energy storage and management. The aim is to increase market penetration in all product groups.

### (7.74.1.5) Have you estimated the avoided emissions of this low-carbon product(s) or service(s)

Select from:

- Yes

## (7.74.1.6) Methodology used to calculate avoided emissions

Select from:

Other, please specify :We calculated the avoided emissions based on the average grid emission factor for Germany and our

## (7.74.1.7) Life cycle stage(s) covered for the low-carbon product(s) or services(s)

Select from:

Use stage

## (7.74.1.8) Functional unit used

kg CO2e per kWh

## (7.74.1.9) Reference product/service or baseline scenario used

We compared the production of 20,410,000 kWh electricity through our 3,627 installed photovoltaic systems with the average German grid mix (690g/kWh) in 2024.

## (7.74.1.10) Life cycle stage(s) covered for the reference product/service or baseline scenario

Select from:

Use stage

## (7.74.1.11) Estimated avoided emissions (metric tons CO2e per functional unit) compared to reference product/service or baseline scenario

0.69

## (7.74.1.12) Explain your calculation of avoided emissions, including any assumptions

The calculation is based on the saving of emissions due to the production of electricity through the installed photovoltaic systems in 2024. Emissions are calculated using the relevant emission factor as described under methodology (kg CO2/kWh). The revenue is based on the calculation under the EU-Taxonomy framework out of the total revenues of 7,080 million Euro, 2 million Euro revenue was generated with all installed photovoltaic systems.

## (7.74.1.13) Revenue generated from low-carbon product(s) or service(s) as % of total revenue in the reporting year

**(7.76) Does your organization manage net zero carbon buildings?**

Select from:

No, but we plan to in the future

**(7.77) Did your organization complete new construction or major renovations projects designed as net zero carbon in the last three years?**

Select from:

No, but we plan to in the future

**(7.78) Explain your organization's plan to manage, develop or construct net zero carbon buildings, or explain why you do not plan to do so.**

We have clear, group-wide targets for energy consumption and efficiency standards for all construction and modernization projects. Our decarbonization pathway is oriented towards the Paris 1.5° target and is based on a scientifically verified calculation. Accordingly, the most important key figures in this respect are the average primary energy consumption per square meter as well as the CO2 intensity of our existing portfolio in Germany. It also feeds into our Sustainability Performance Index (SPI), which is our most important non-financial performance indicator. Compliance with the defined targets is an important part of the Executive Board's decision-making process for new construction projects. We align our construction projects to EPC Class A/A+ (in final energy demand) or KfW standards, such as the KfW55 standard. New construction projects are compliant with the EU Taxonomy Regulation. For every new construction and modernization project, we check, whether PV electricity, other renewable energy sources (e.g. green district heating, pellet heating, heat pumps) and electromobility can be used. We also pay attention to resource conservation and environmental protection during construction. We ensure that residential units that have reached the end of their life cycle are dismantled in a resource-conserving manner. Our holistic planning approach also includes a focus on neighbourhood approaches (especially with regard to energy and heat supply), in which we can apply the findings from our research projects. The generation of solar energy that can be used directly in the neighbourhood or building plays an important role here. Electromobility is always considered in this context. A wide variety of measures also help to significantly improve energy standards in existing buildings - for example, as part of the "Energiesprong" approach. Our efforts in the field of energy efficiency for buildings become clear when looking at our new construction projects. The majority of our new construction projects have a very high energy efficiency class. Due to the heated debate and lack of a uniform definition and critique of the term net zero building, we would currently like to distance ourselves from passing off individual projects as net zero projects, even though they already meet a very high energy efficiency standard – with more than 98 per cent of our newly constructed buildings in Germany with efficiency class (based on German EPC) A or better. Instead, we are striving to improve the energy efficiency of our buildings to the best possible standard through further measures and the performance of life cycle analyses.

**(7.79) Has your organization retired any project-based carbon credits within the reporting year?**

Select from:

No

## C11. Environmental performance - Biodiversity

### (11.2) What actions has your organization taken in the reporting year to progress your biodiversity-related commitments?

#### (11.2.1) Actions taken in the reporting period to progress your biodiversity-related commitments

Select from:

- Yes, we are taking actions to progress our biodiversity-related commitments

#### (11.2.2) Type of action taken to progress biodiversity- related commitments

Select all that apply

- Land/water protection
- Land/water management
- Species management
- Education & awareness
- Law & policy

[Fixed row]

### (11.3) Does your organization use biodiversity indicators to monitor performance across its activities?

	<p>Does your organization use indicators to monitor biodiversity performance?</p>	<p>Indicators used to monitor biodiversity performance</p>
	<p>Select from:</p> <ul style="list-style-type: none"><li><input checked="" type="checkbox"/> Yes, we use indicators</li></ul>	<p>Select all that apply</p> <ul style="list-style-type: none"><li><input checked="" type="checkbox"/> State and benefit indicators</li></ul>

	Does your organization use indicators to monitor biodiversity performance?	Indicators used to monitor biodiversity performance
		<input checked="" type="checkbox"/> Other, please specify :Status-quo indicators

[Fixed row]

#### (11.4) Does your organization have activities located in or near to areas important for biodiversity in the reporting year?

##### Legally protected areas

###### (11.4.1) Indicate whether any of your organization's activities are located in or near to this type of area important for biodiversity

Select from:

Yes

###### (11.4.2) Comment

As part of the materiality analysis and the continuous process of analysing and selecting locations for construction and modernization measures, we take into account the impact of our business activities (including the upstream and downstream value chain) on people and nature. This is done to the same extent at all locations, so that we have a functioning early warning system to identify potential critical impacts in advance of measures. This enables us to prevent ecologically sensitive or valuable locations from being affected as early as the planning process. Our new construction is built in compliance with EU taxonomy, meaning that our buildings are not constructed on valuable agricultural and cultural land, recognized high-value underdeveloped areas or forests (see also E4 at: <https://report.vonovia.com/2024/q4/en/iro-1-identify-and-assess-material-impacts-risks-and-opportunities>) Nevertheless, for historical reasons, there are a very small number of individual buildings in the rental that are located in designated nature conservation areas. However, these are existing buildings, i.e. measures that would interfere with the natural environment are not carried out here.

##### UNESCO World Heritage sites

###### (11.4.1) Indicate whether any of your organization's activities are located in or near to this type of area important for biodiversity

Select from:

No

#### (11.4.2) Comment

n/a

#### UNESCO Man and the Biosphere Reserves

#### (11.4.1) Indicate whether any of your organization's activities are located in or near to this type of area important for biodiversity

*n/a*

*[Fixed row]*

**(11.4.1) Provide details of your organization's activities in the reporting year located in or near to areas important for biodiversity.**

**Row 1**

**(11.4.1.2) Types of area important for biodiversity**

Select all that apply

Legally protected areas

### (11.4.1.3) Protected area category (IUCN classification)

Select from:

- Category Ia-III

### (11.4.1.4) Country/area

Select from:

- Germany

### (11.4.1.5) Name of the area important for biodiversity

*various*

### (11.4.1.6) Proximity

Select from:

- Adjacent

### (11.4.1.8) Briefly describe your organization's activities in the reporting year located in or near to the selected area

*Vonovia owns individual residential buildings that are located in or adjacent to designated landscape conservation areas. These are rented out to private individuals. These are a very small number of existing buildings. See also Annual Report 2024: <https://report.vonovia.com/2024/q4/en/iro-1-identify-and-assess-material-impacts-risks-and-opportunities> (section E4)*

### (11.4.1.9) Indicate whether any of your organization's activities located in or near to the selected area could negatively affect biodiversity

Select from:

- No

### (11.4.1.11) Explain how your organization's activities located in or near to the selected area could negatively affect biodiversity, how this was assessed, and describe any mitigation measures implemented

*Negative impacts on biodiversity in these protected landscape areas could arise in particular from construction and development projects. However, (new) construction projects are not legally possible (or only under strict conditions) and are not intended by Vonovia. We do not carry out any measures here that would interfere with the natural environment.*
